

# Q measurement of sapphire fibers (Rome)

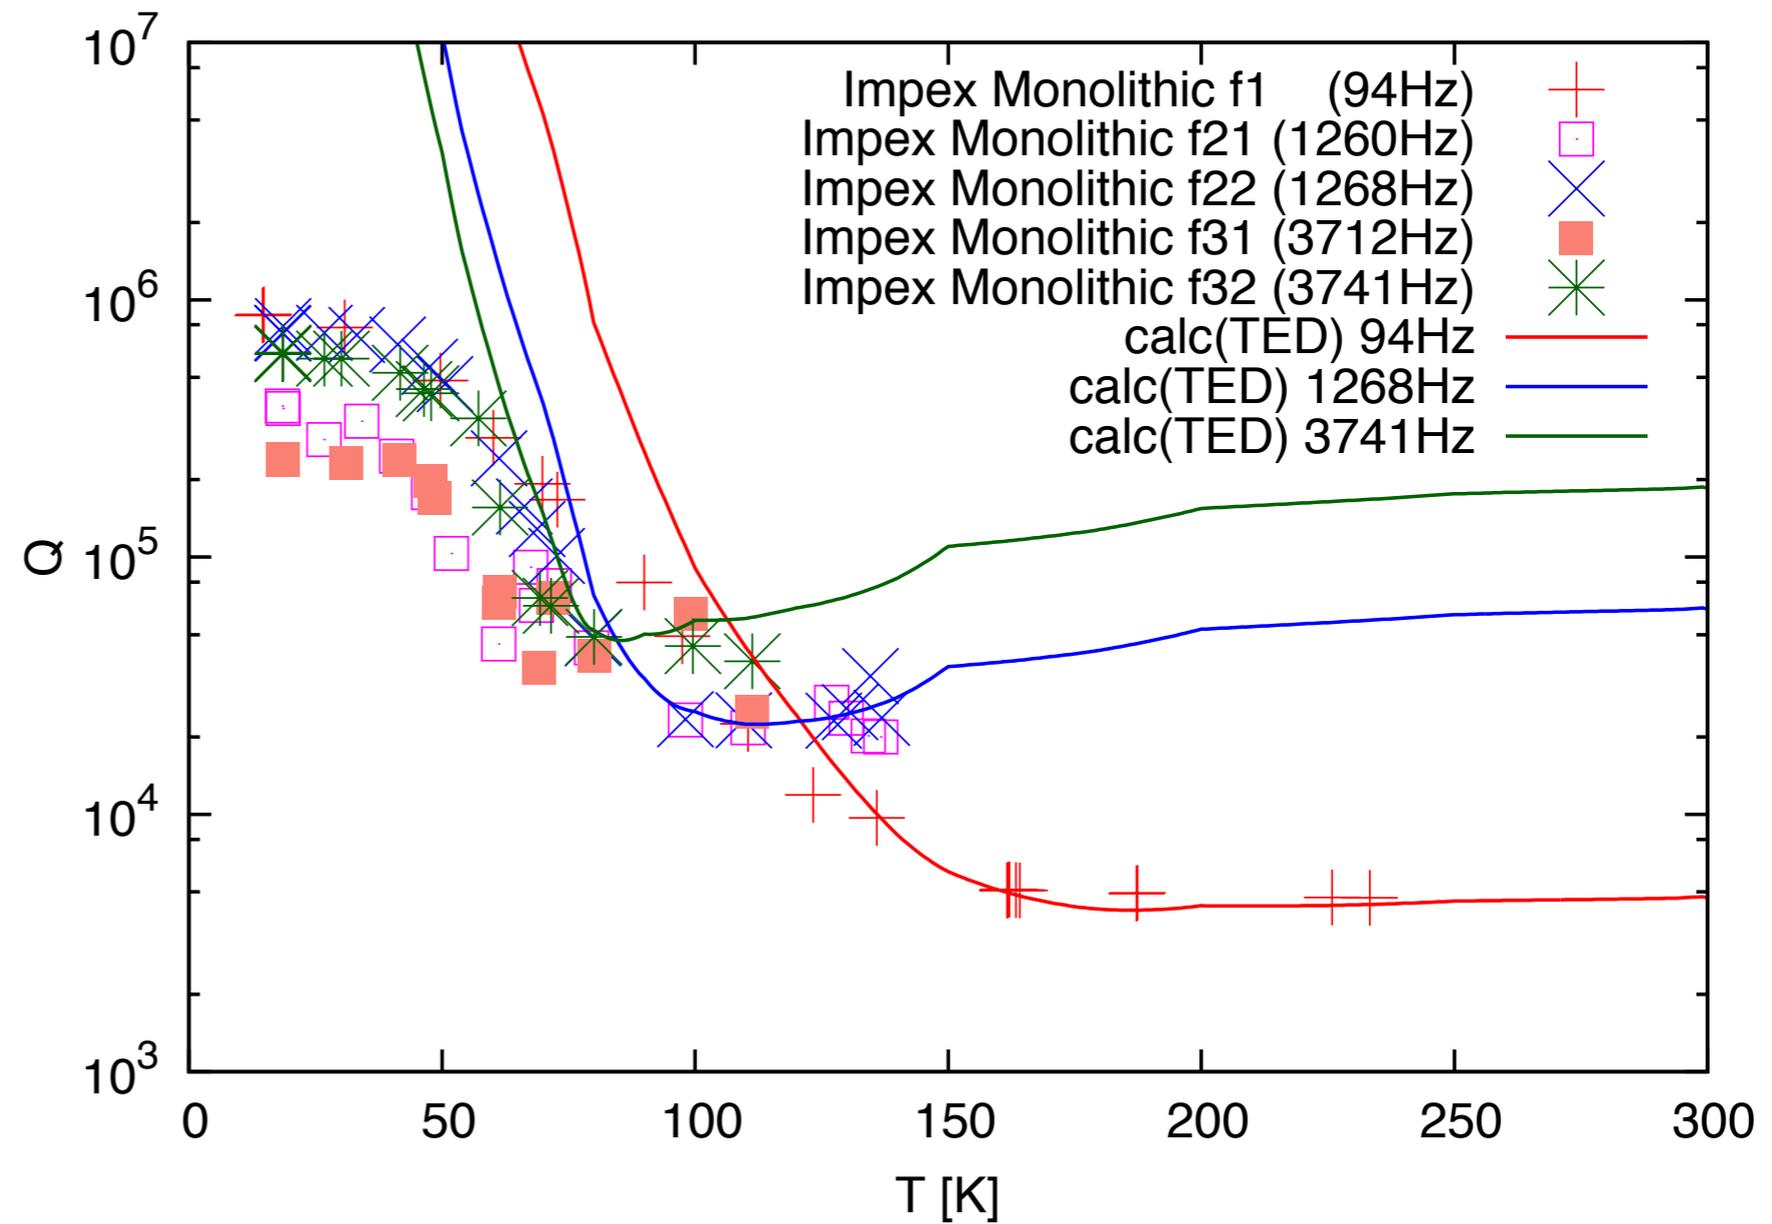

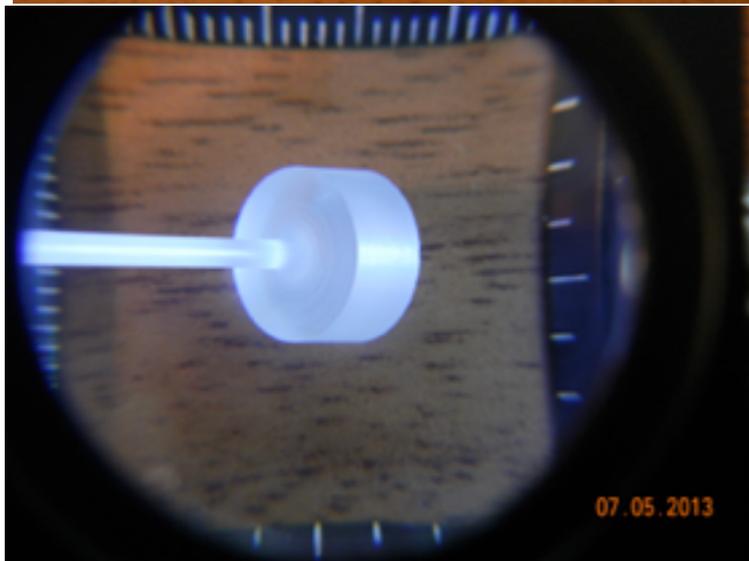

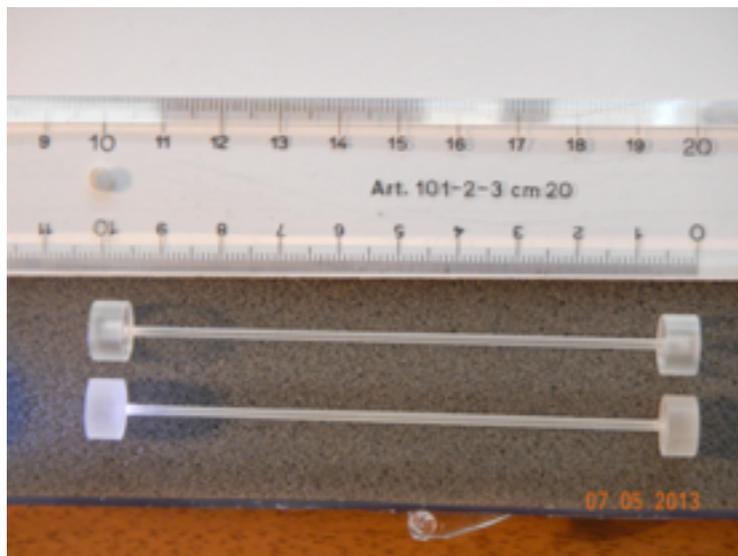

2014/6/25 Dan Chen

# Measurement setup

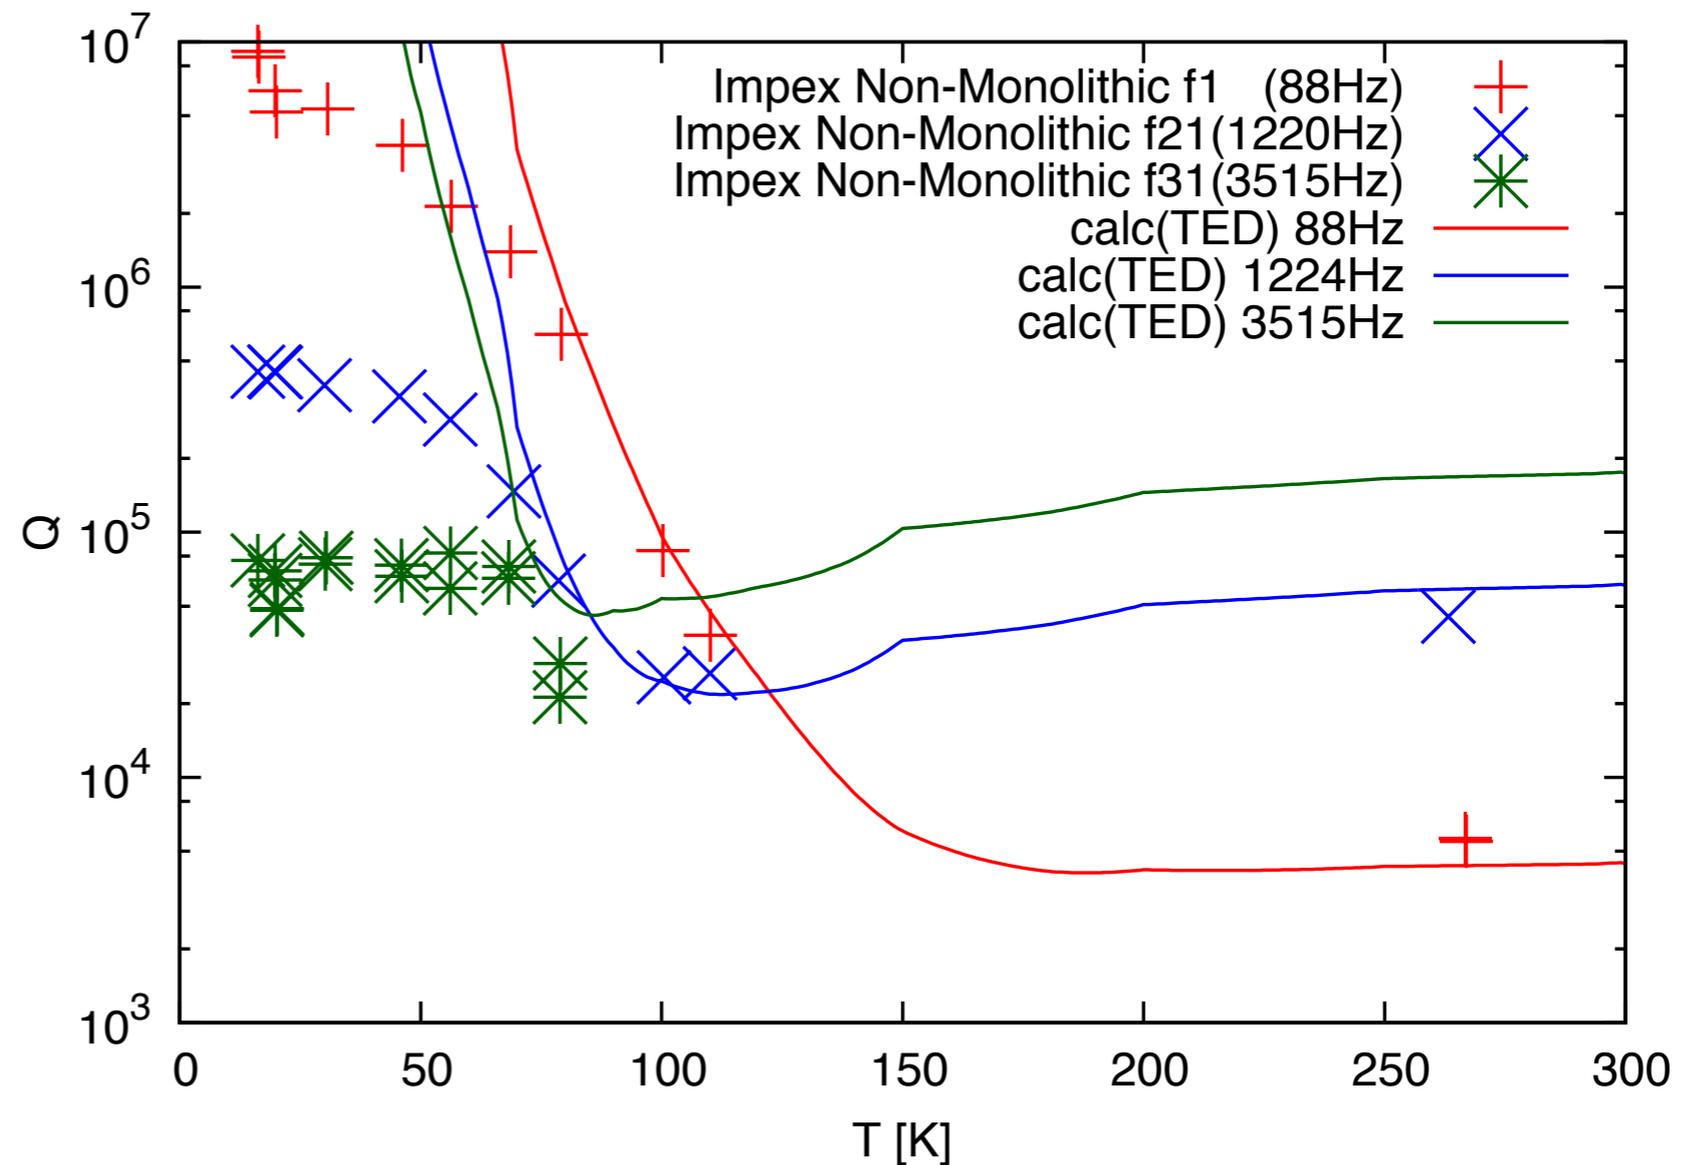

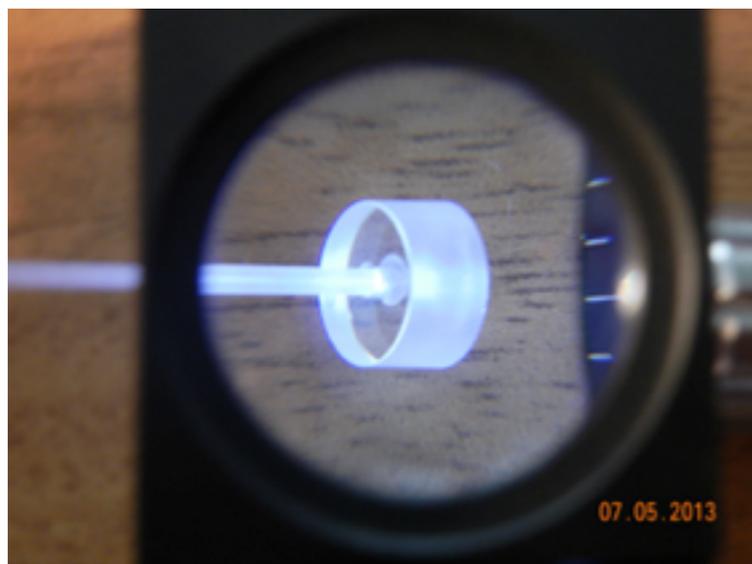

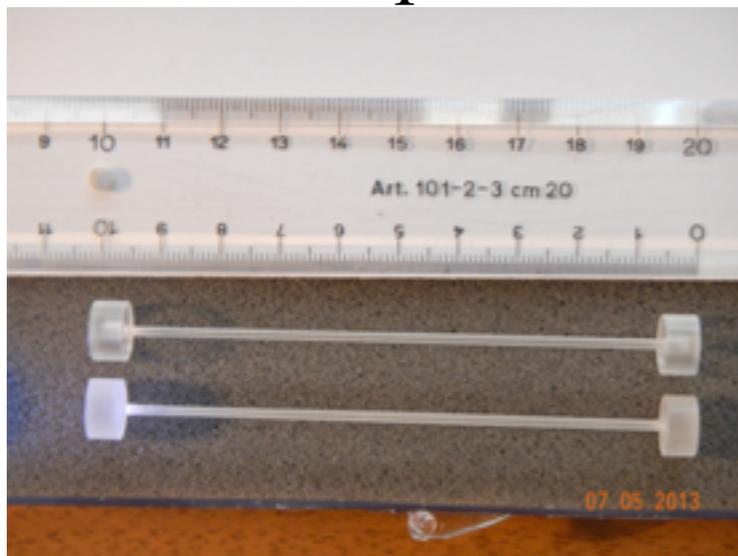

# Fiber A (Sho, SH, Mo, NQ, NT)

- Short
- Small head
- Monolithic
- Normal quality
- No thermal polish

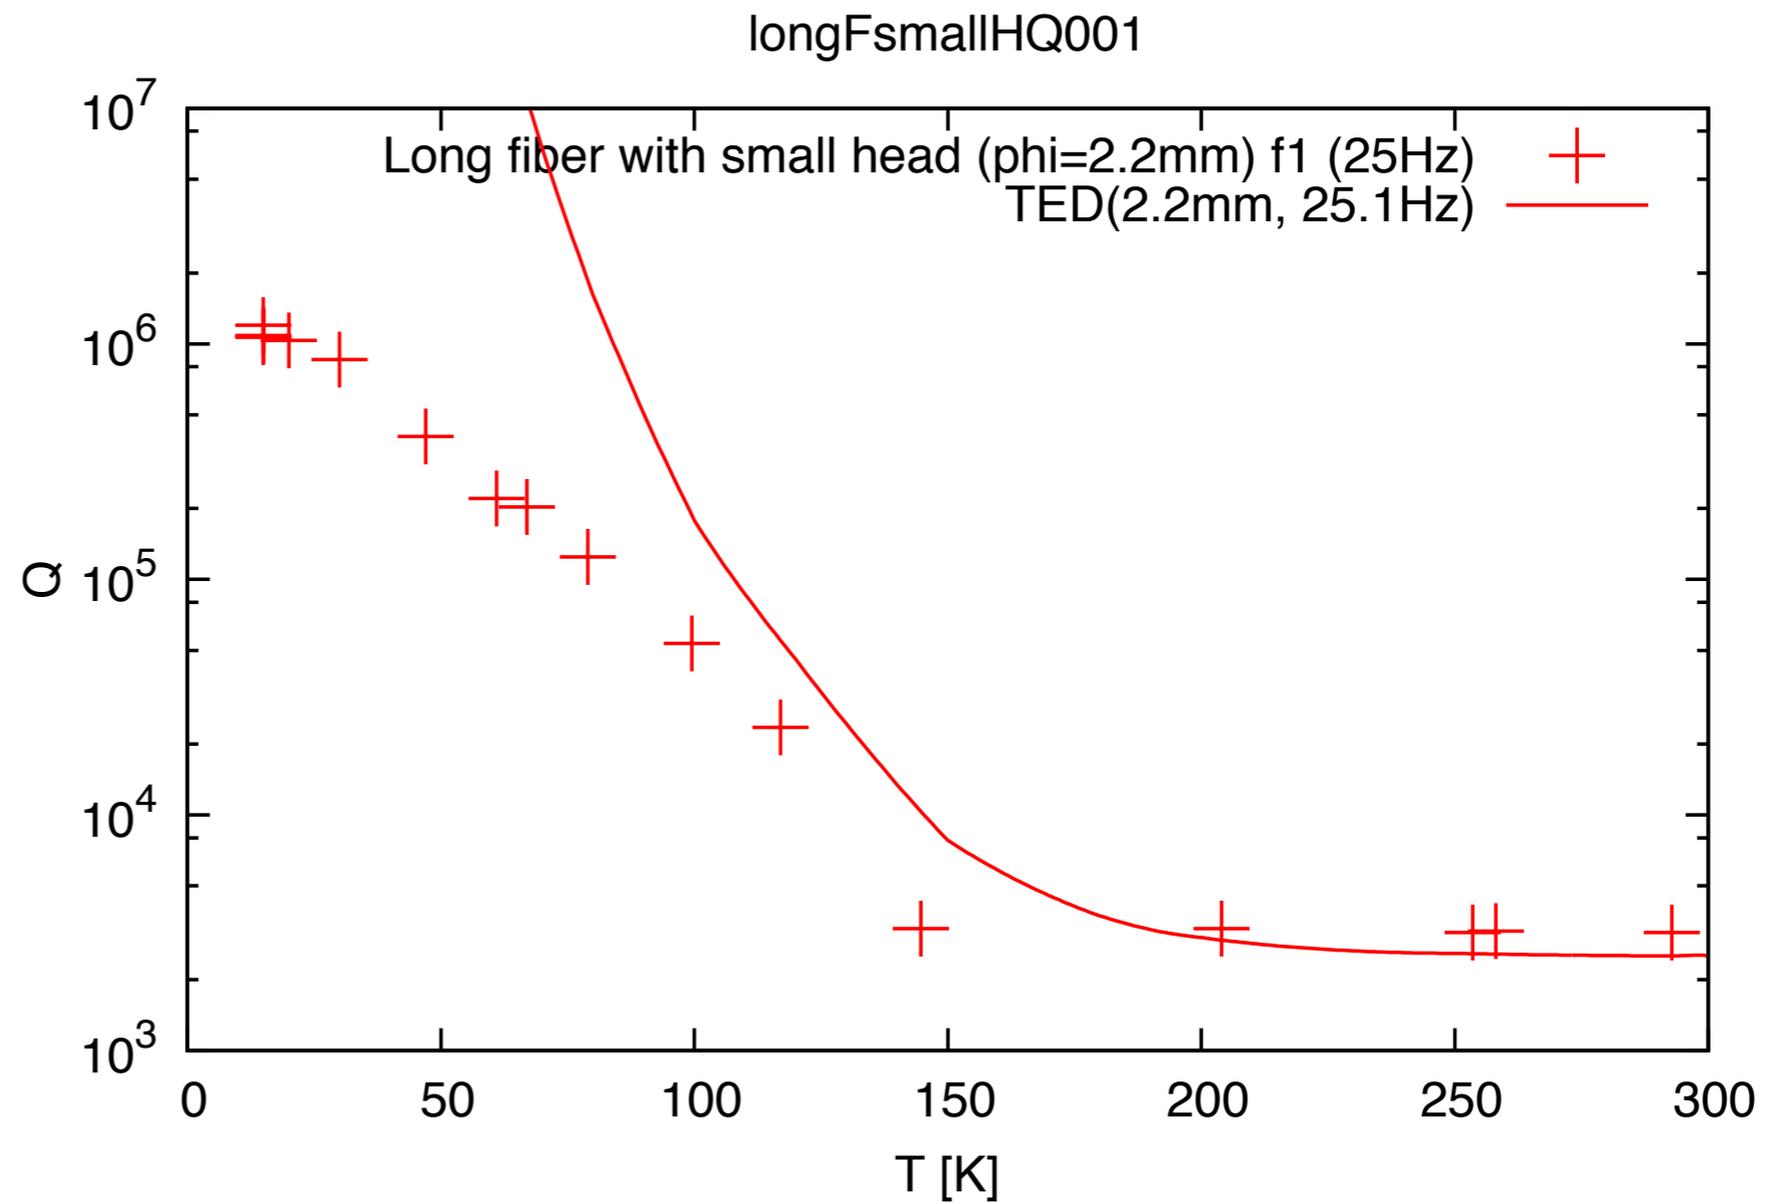

# Fiber B (Sho, SH, NMo1, HQ, T)

- Short
- Small head
- Non-monolithic (Impex bonding 1)
- HEM quality
- Thermal polish

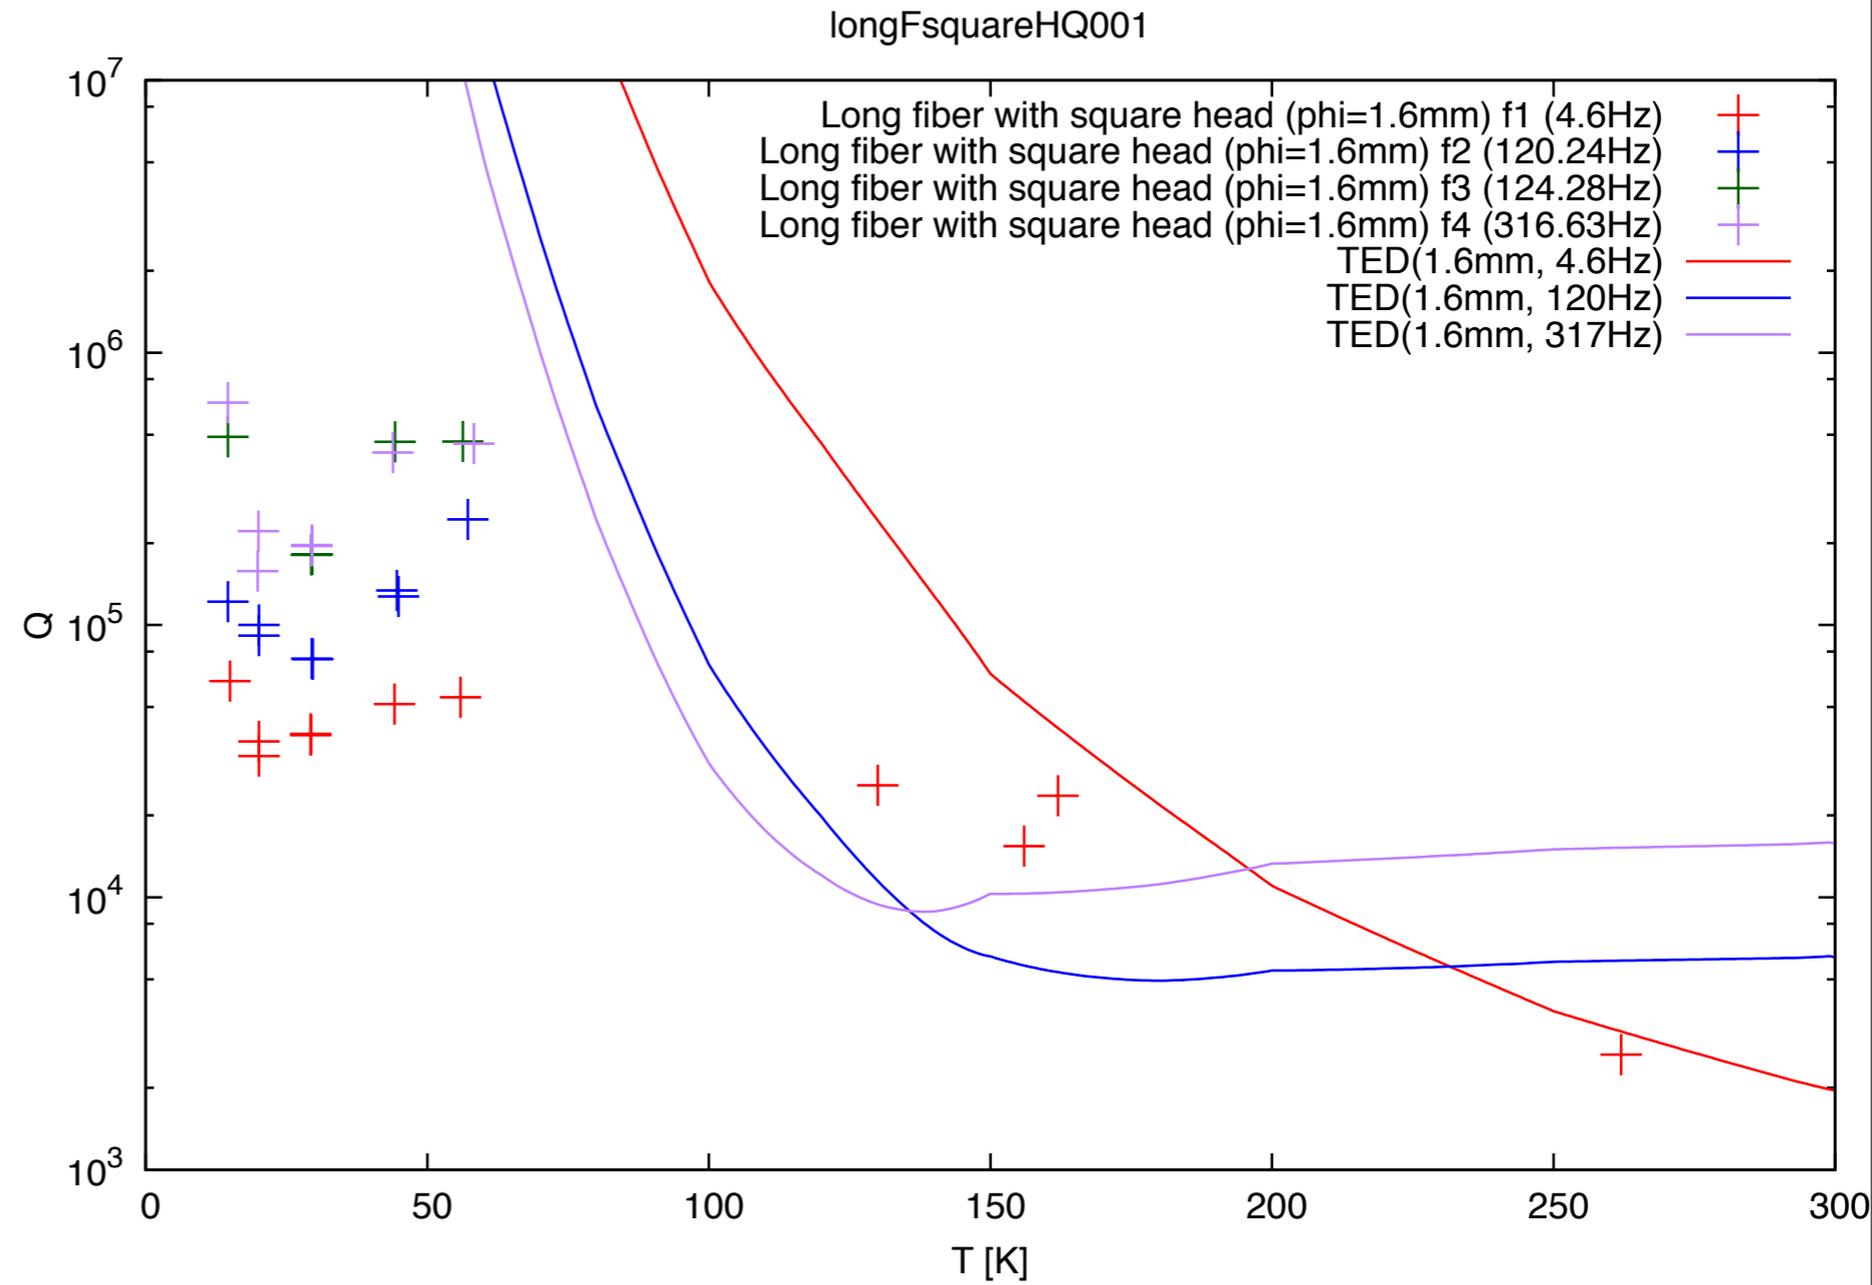

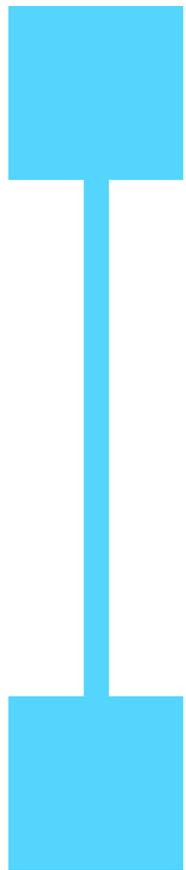

# Fiber C (Lon, SH, Mo, NQ, NT)

- Long
- Small head
- Monolithic
- Normal quality
- No thermal polish

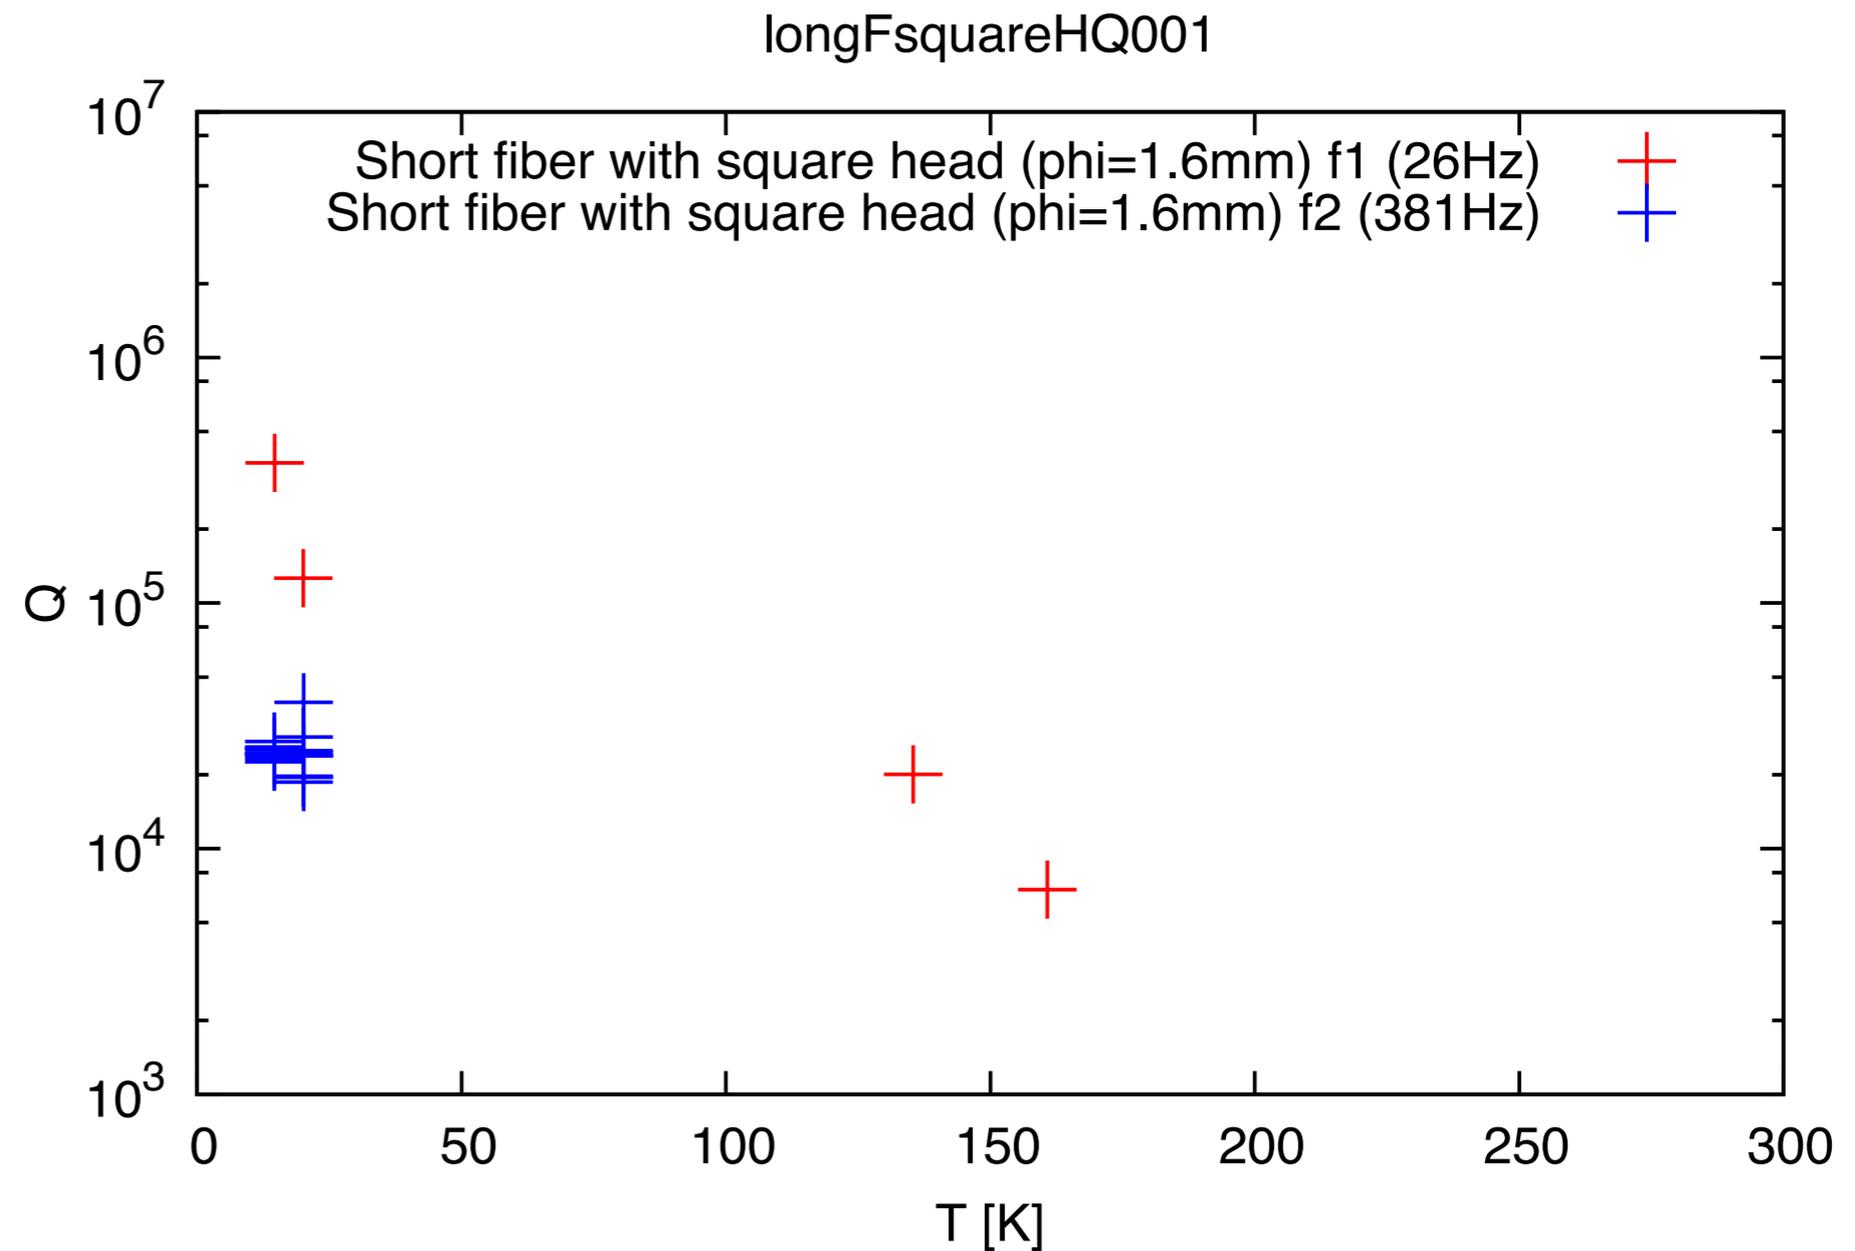

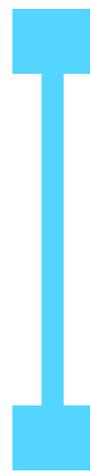

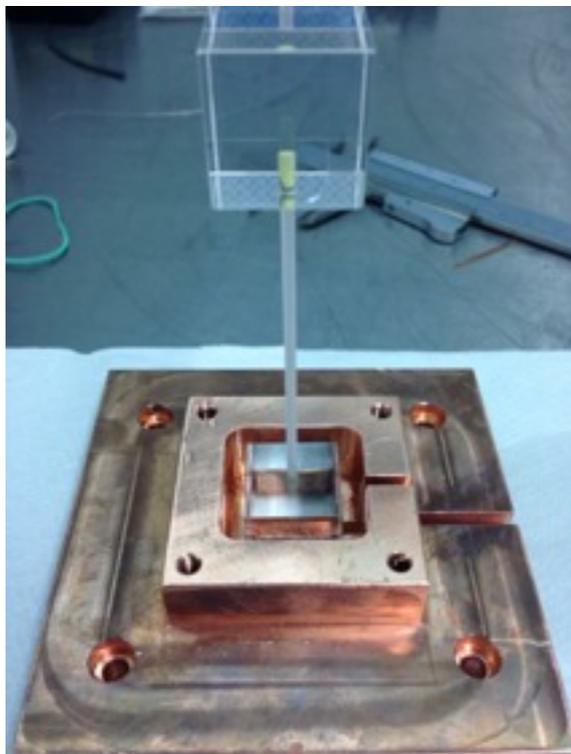

# Fiber D (Lon, BH, NMo2, NQ, T)

- Long
- Big square head
- Non-monolithic Impex bonding2
- Normal quality
- Thermal polish

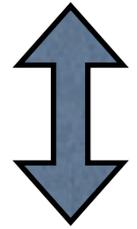

# Fiber E (Sho, BH, NMo2, NQ, T)

- Short
- Big square head
- Non-monolithic  
Impex bonding2
- Normal quality
- Thermal polish

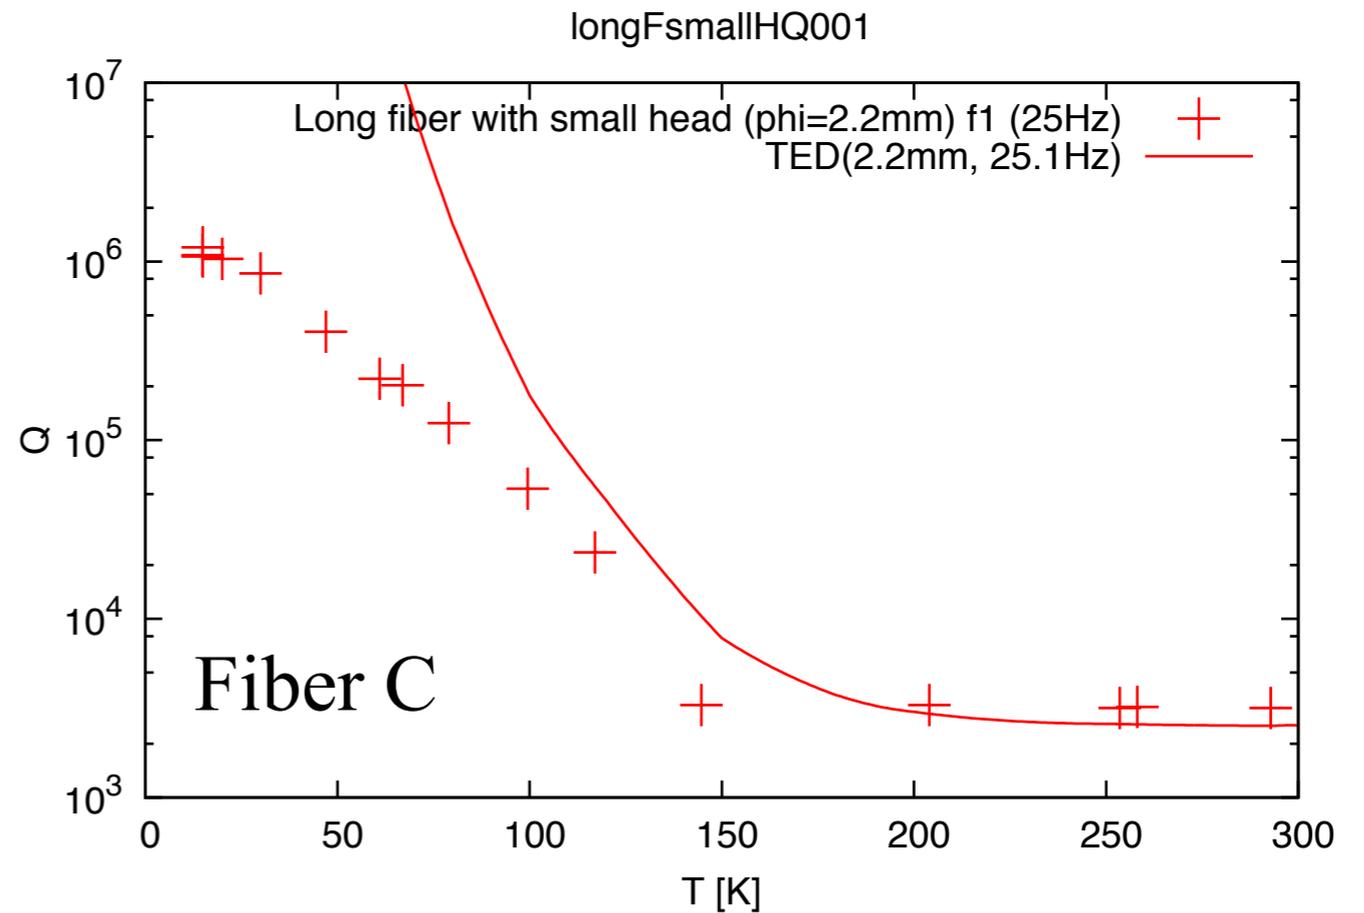

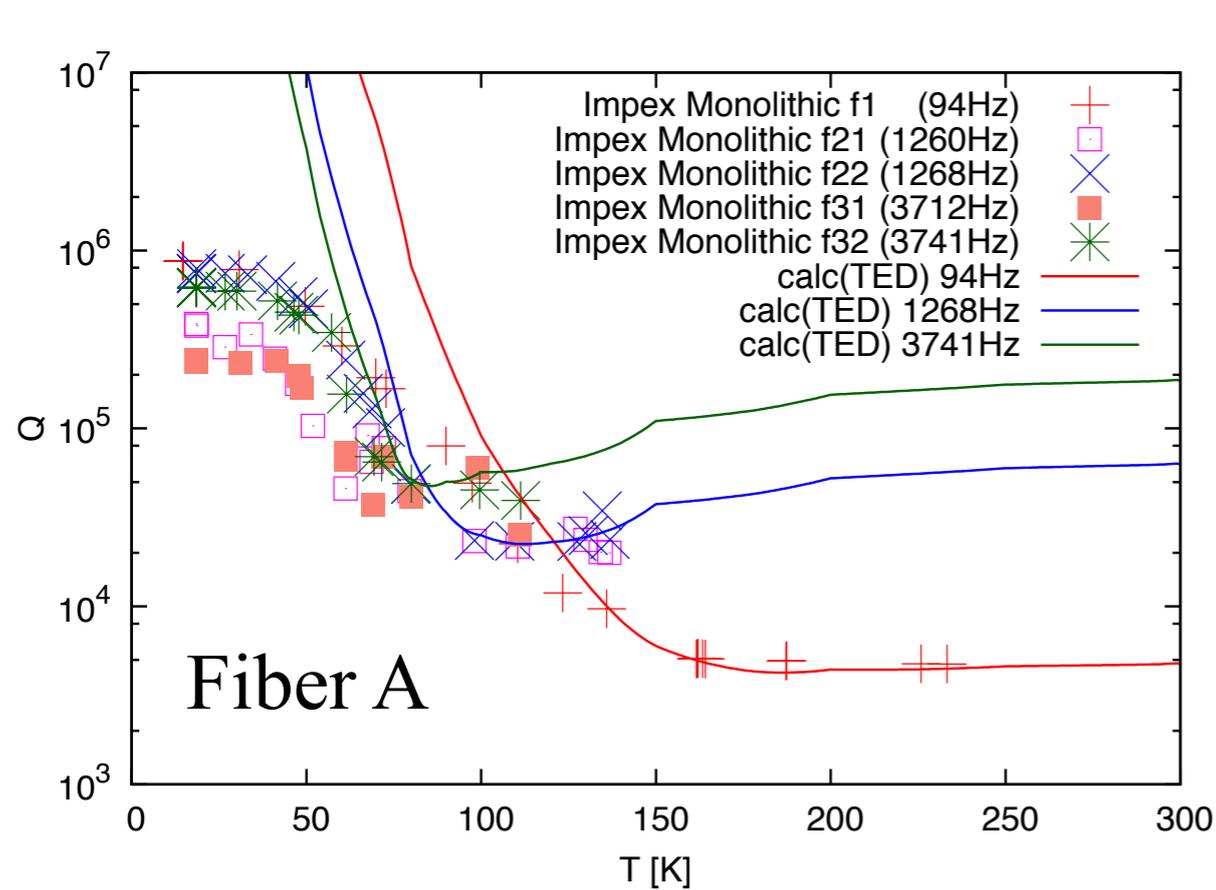

# Compare 1

Fiber A (Sho, SH, Mo, NQ, NT)

Difference: length

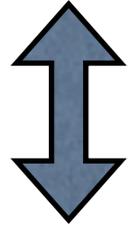

Fiber C (Lon, SH, Mo, NQ, NT)

Consistent.

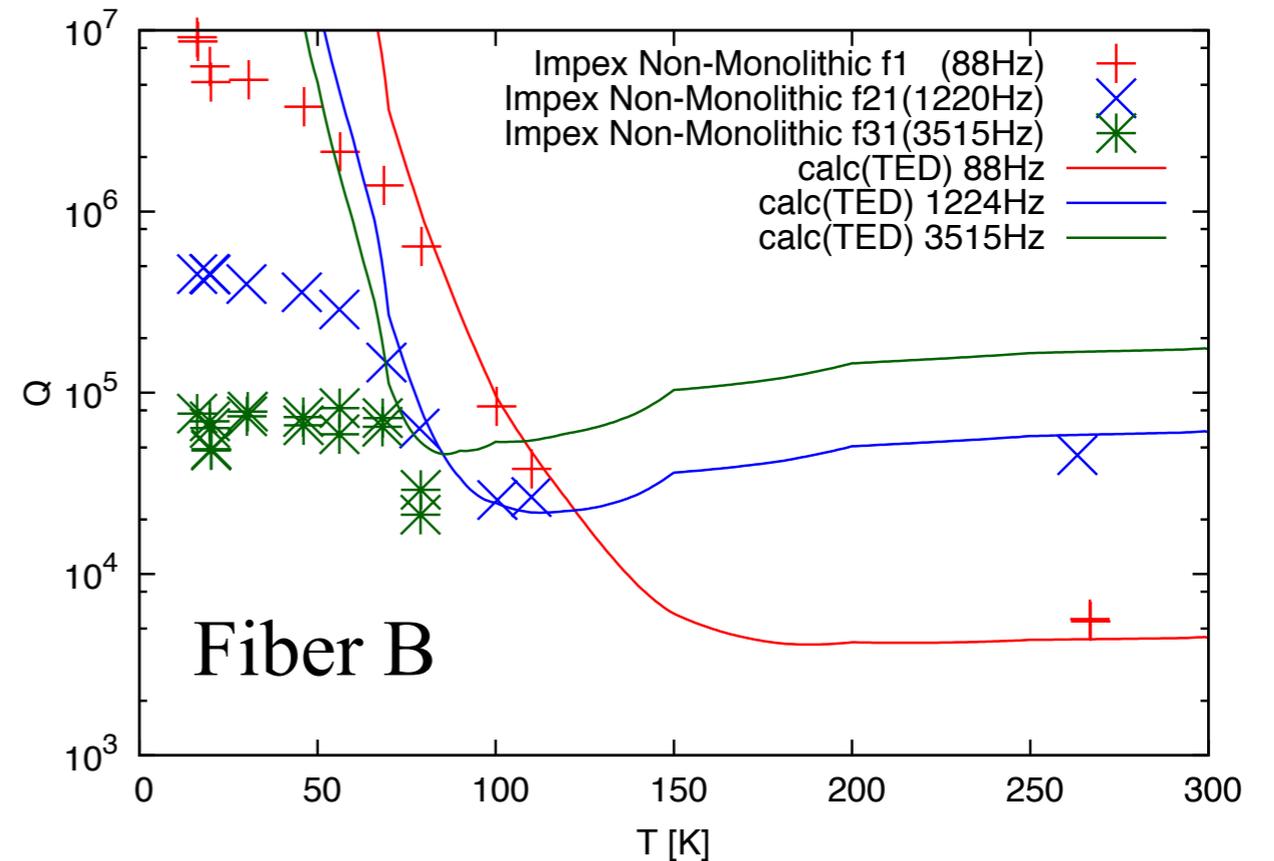

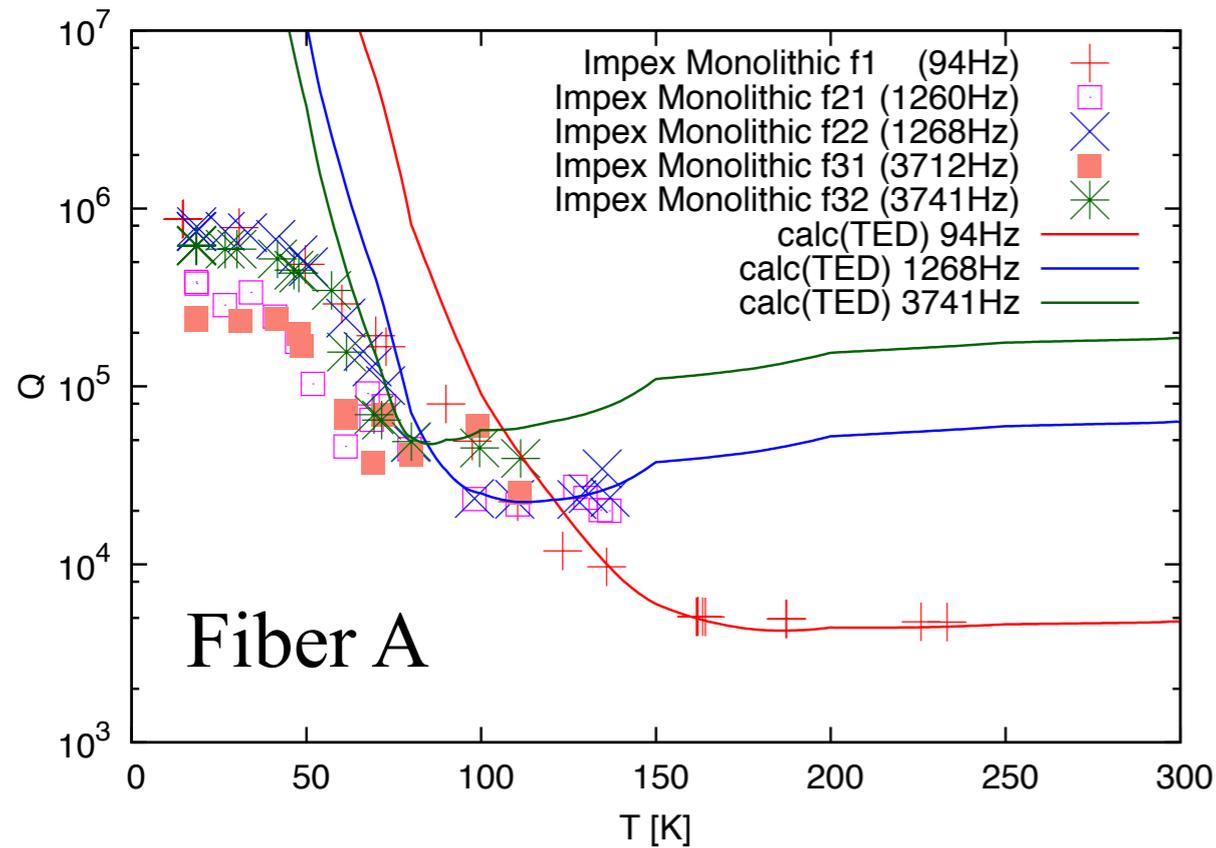

# Compare 2

Fiber A (Sho, SH, Mo, NQ, NT)

Deference: Monolithic, Quality, Thermal polish

Fiber B (Sho, SH, NMo1, HQ, T)

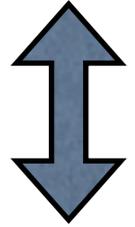

Quality or thermal polish can enhance Q value.

(The effect of thermal polish can not be so effective. ← rms change because of thermal polish is factor 3?)

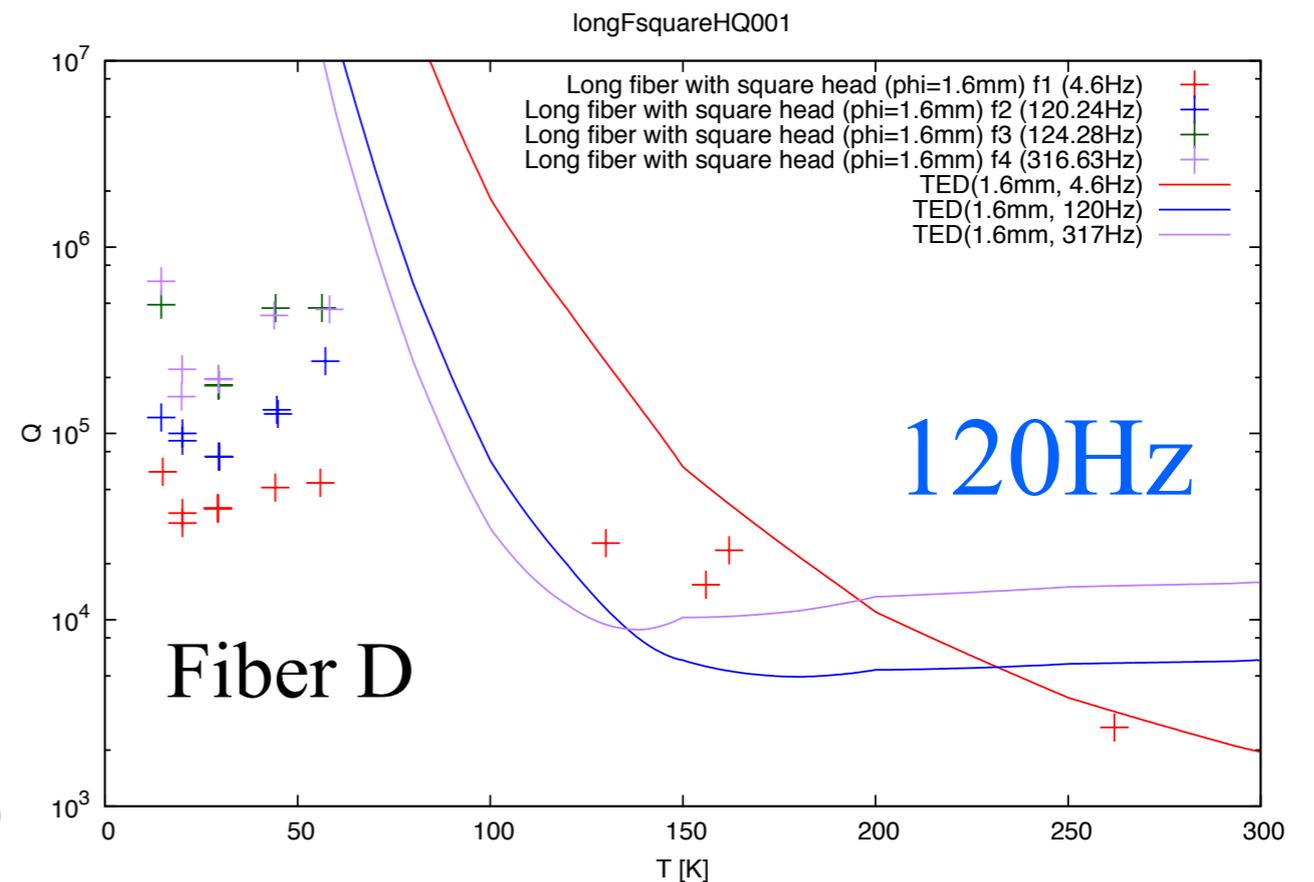

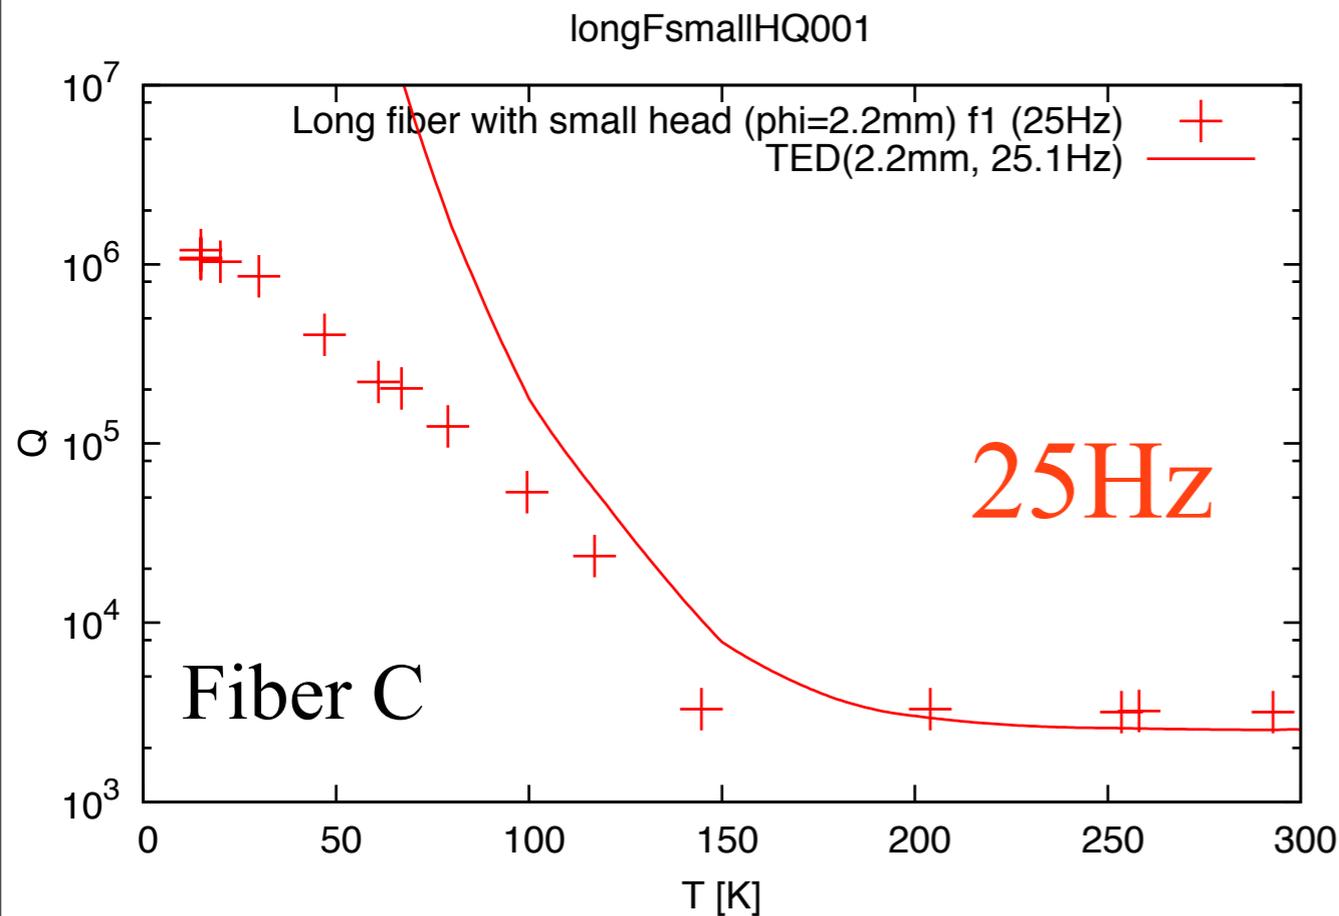

# Compare 3

Fiber C (Sho, SH, Mo, NQ, NT)

Difference: Length, Head, Monolithic

Fiber D (Lon, BH, NMo2, NQ, T)

Recoil loss should be effective at low frequency.

→ Recoil loss does not limit the Q of fiber D at higher modes.

→ Impex bonding 2 can limit the Q of fiber D. (Same material)

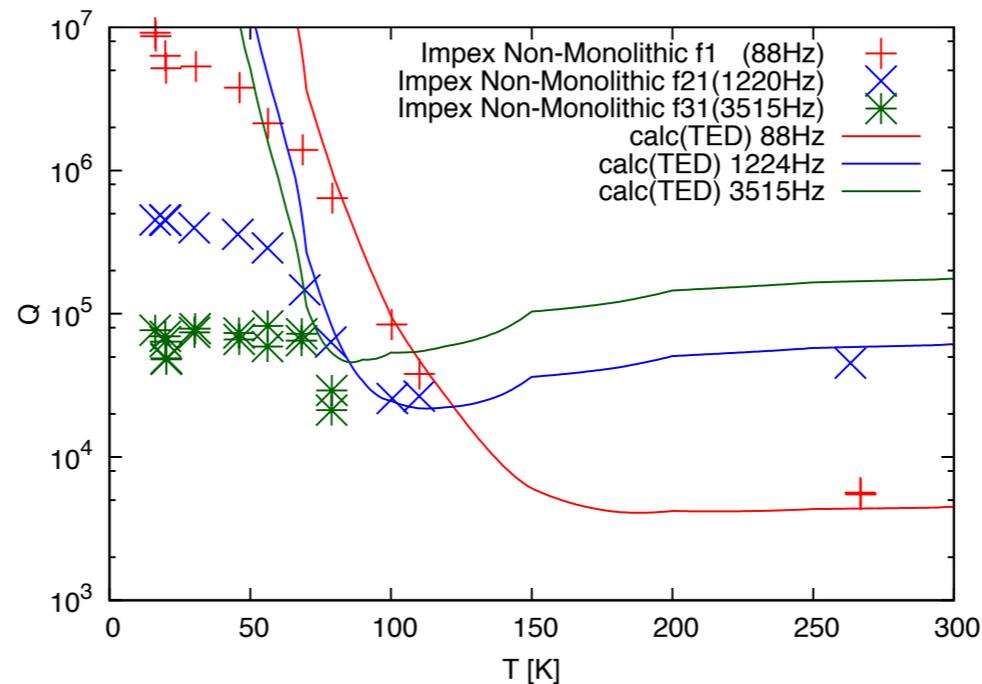

# Thermal noise calculation

## Which Q value do we use?

→ We can use the value of fiber B and fiber C

### Fiber B

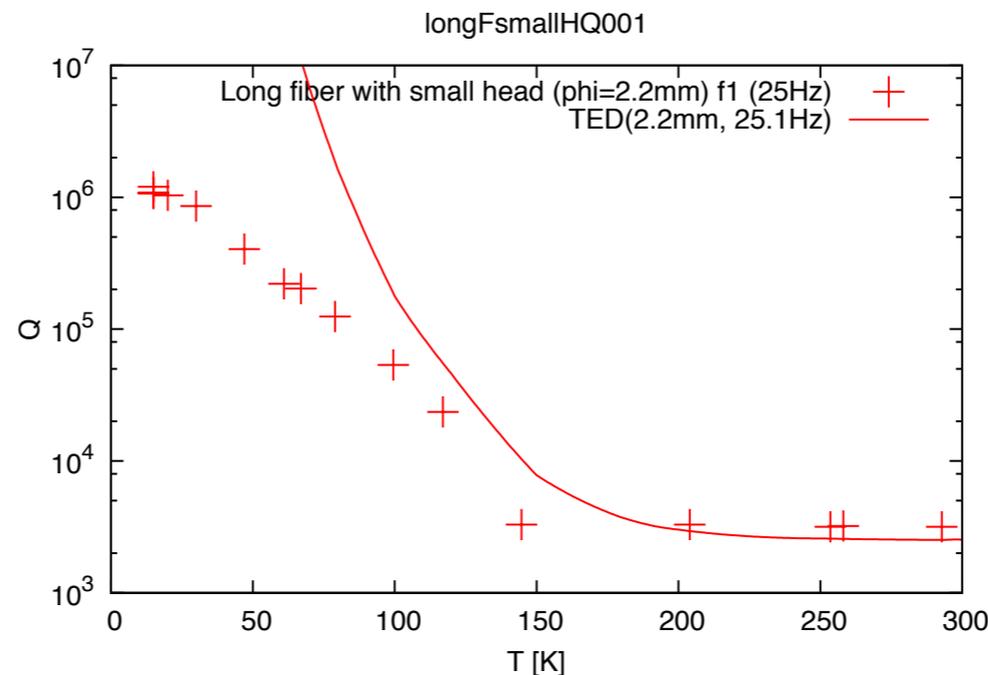

- Short
- Small head
- Non-monolithic (Impex bonding 1)
- HEM quality
- Thermal polish

The best value we know (With head)

### Fiber C

- Long
- Small head
- Monolithic
- Normal quality
- No thermal polish

The fiber we can buy immediately.

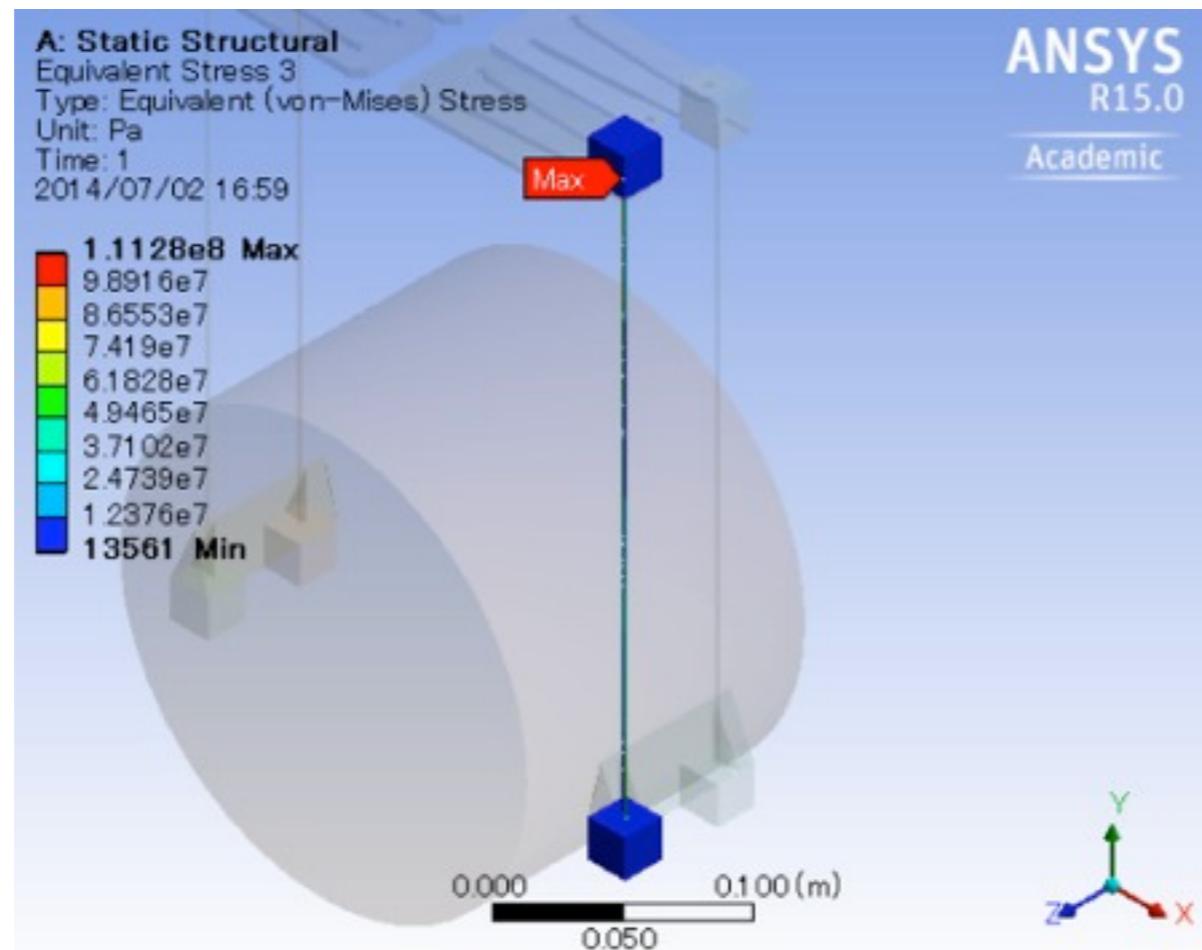

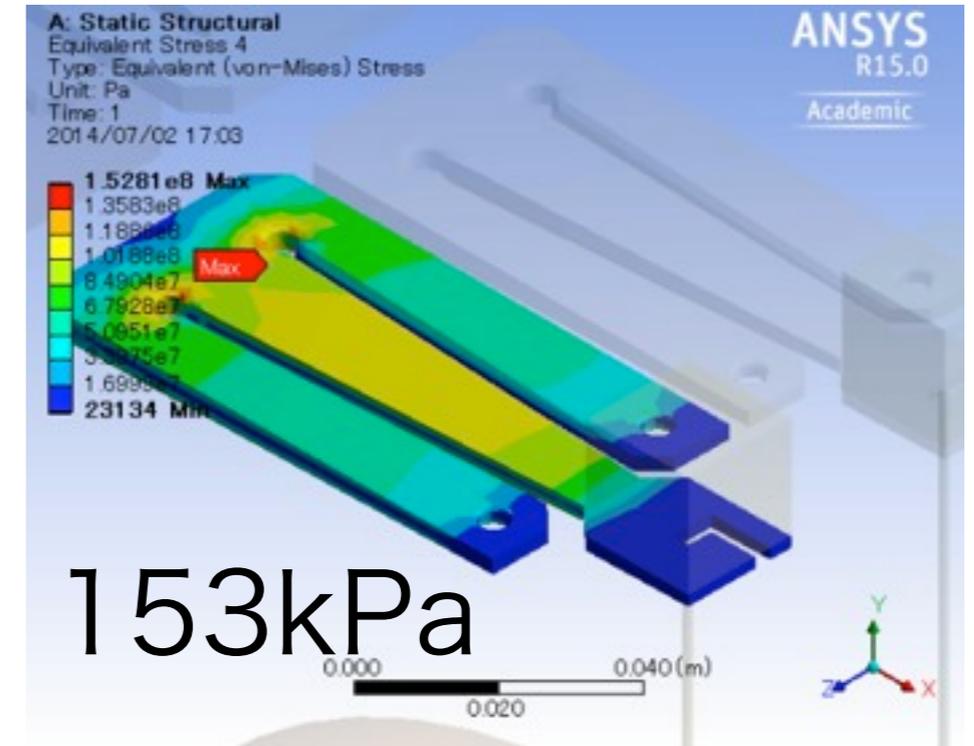

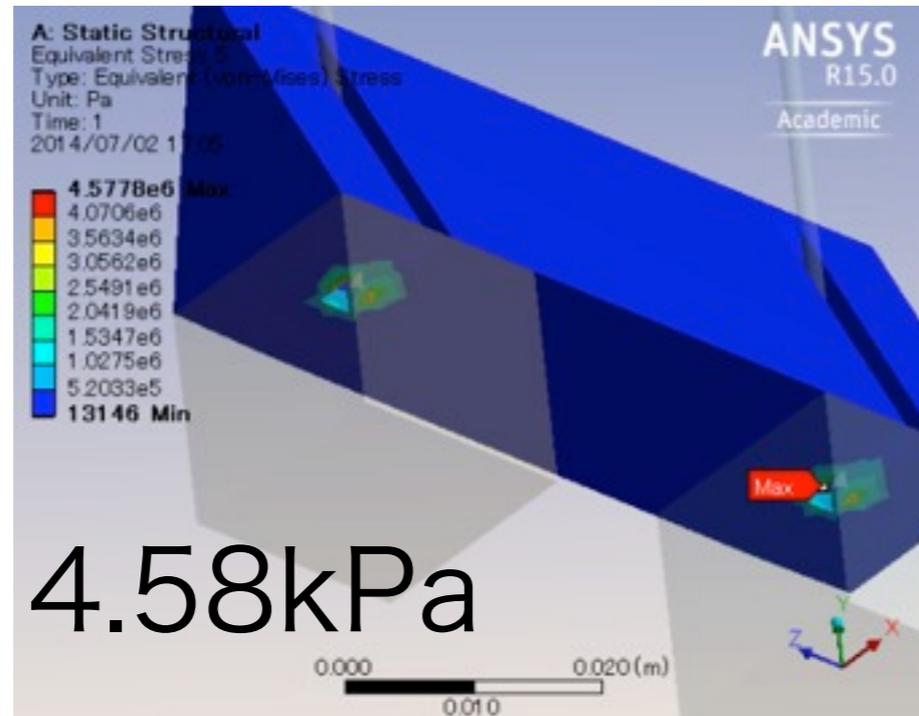

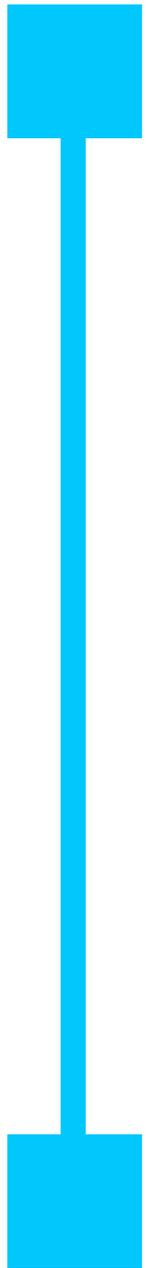

# Different kind of fibers

2014/7/2 Dan Chen

# Fiber 1

20mm\*20mm

20mm

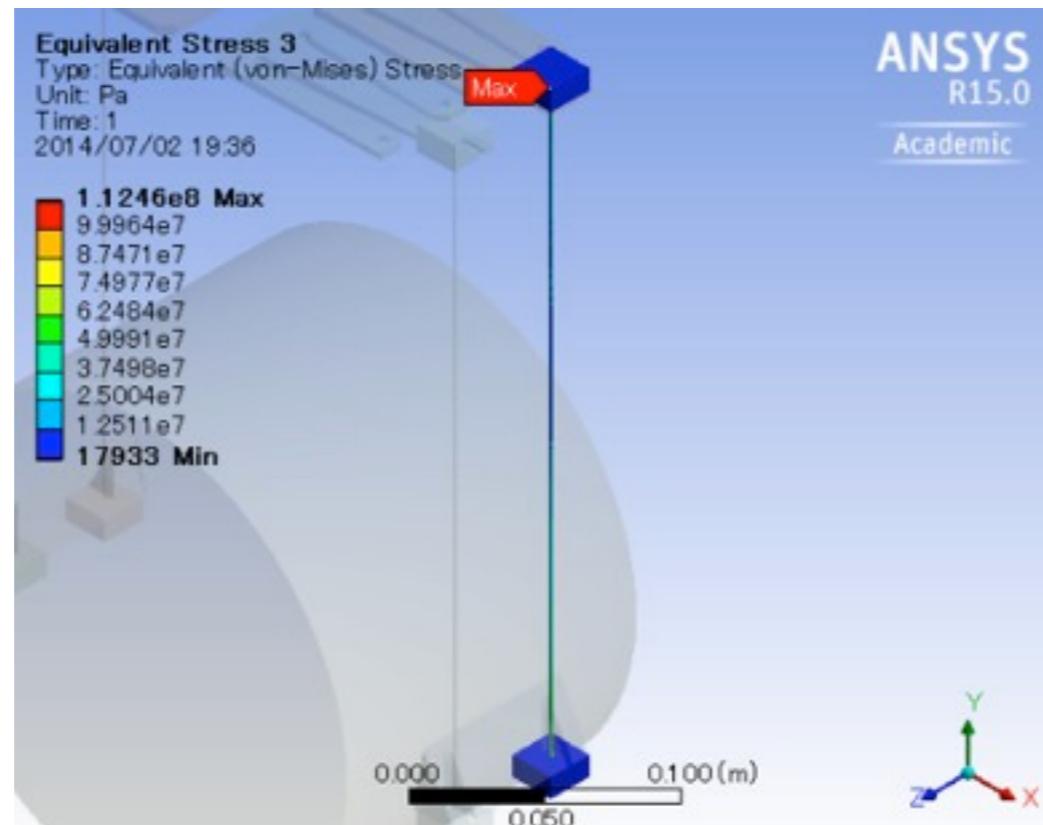

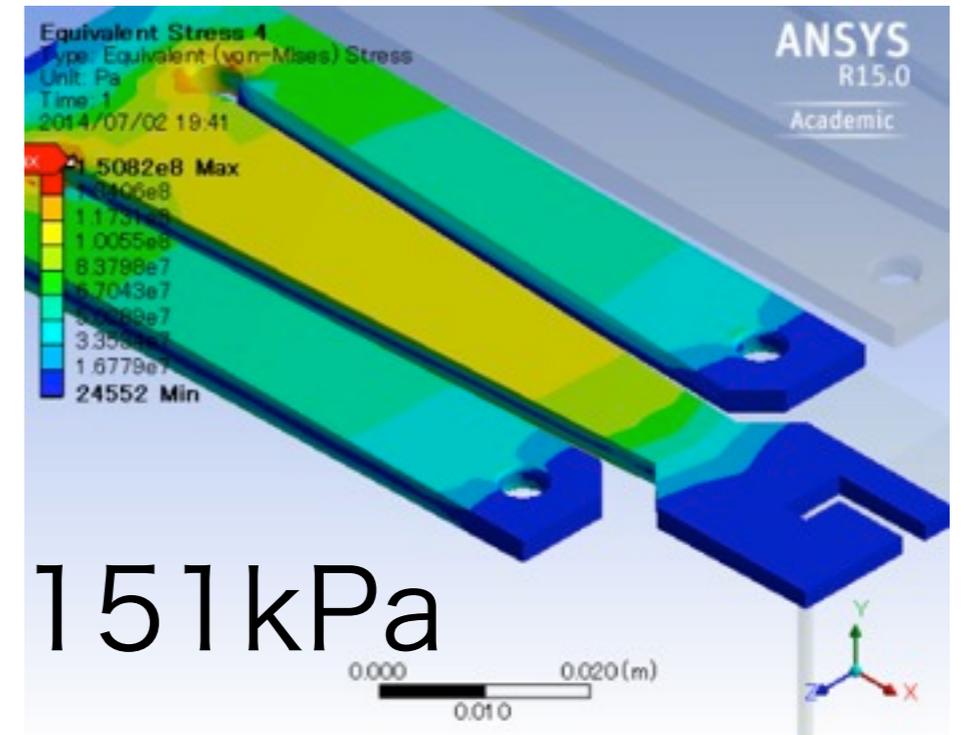

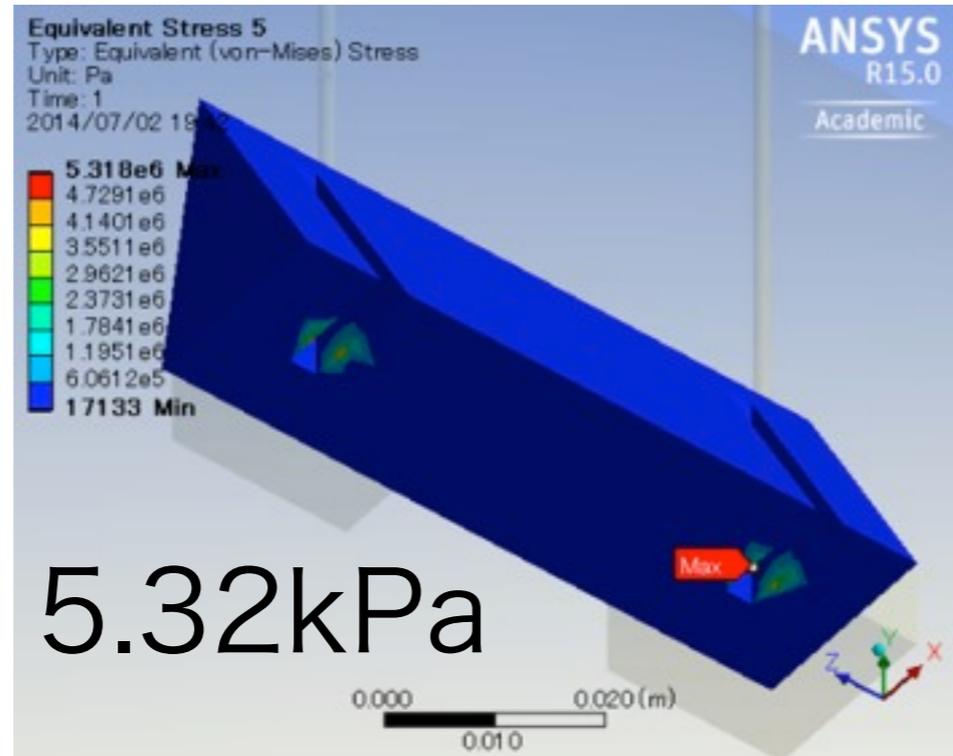

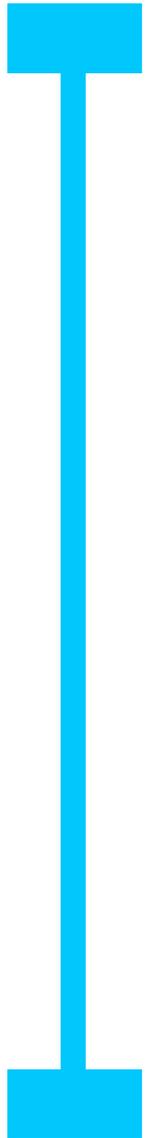

Max in fiber:

111kPa

# Fiber 2

20mm\*20mm

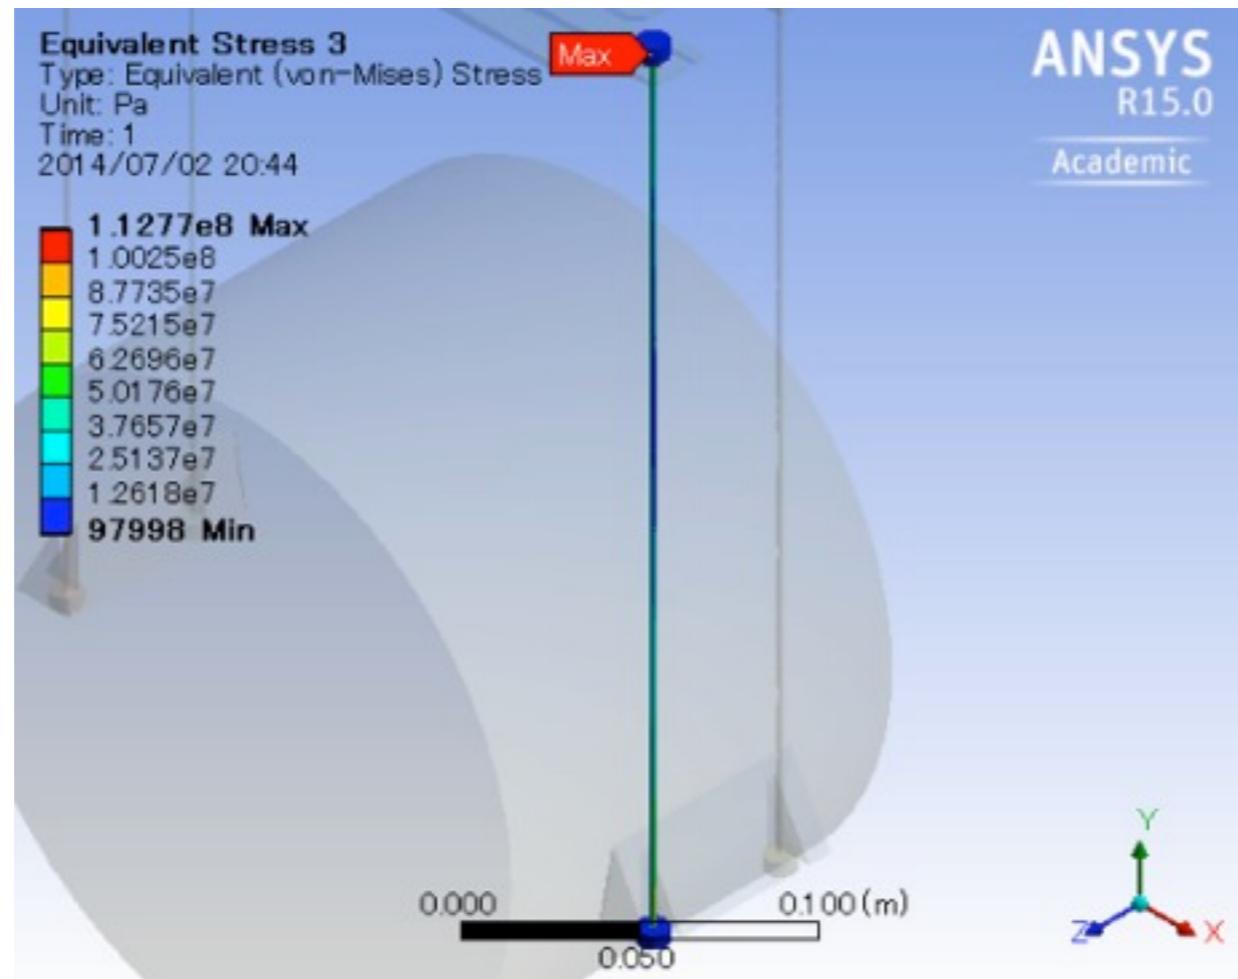

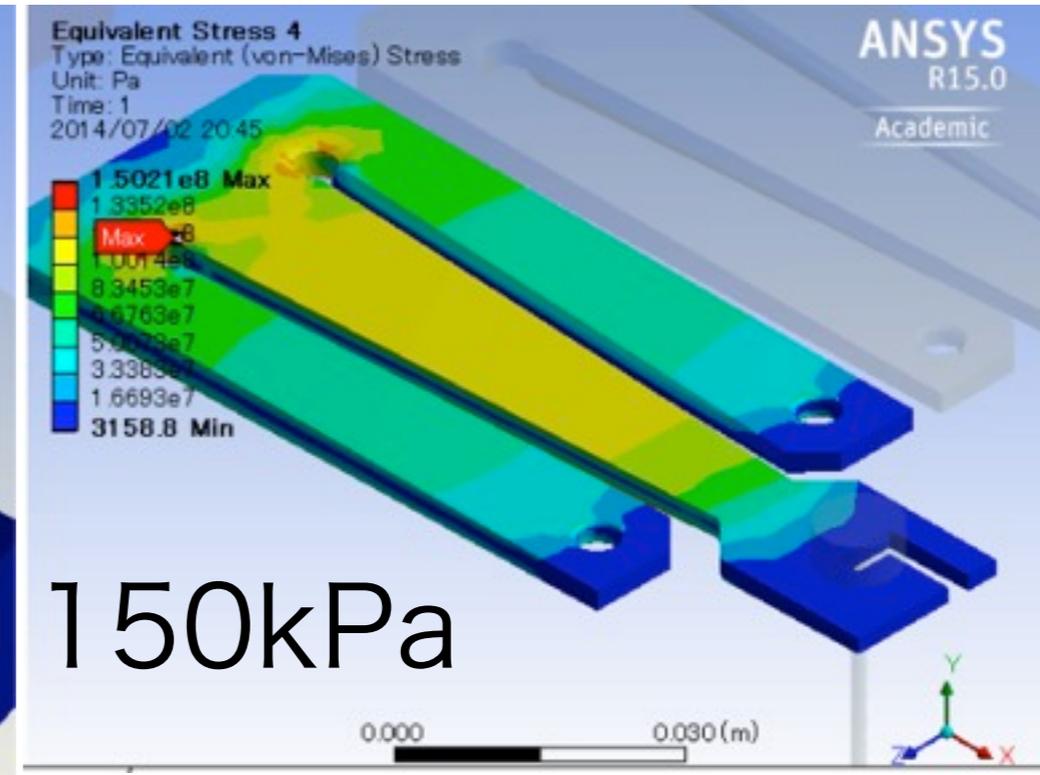

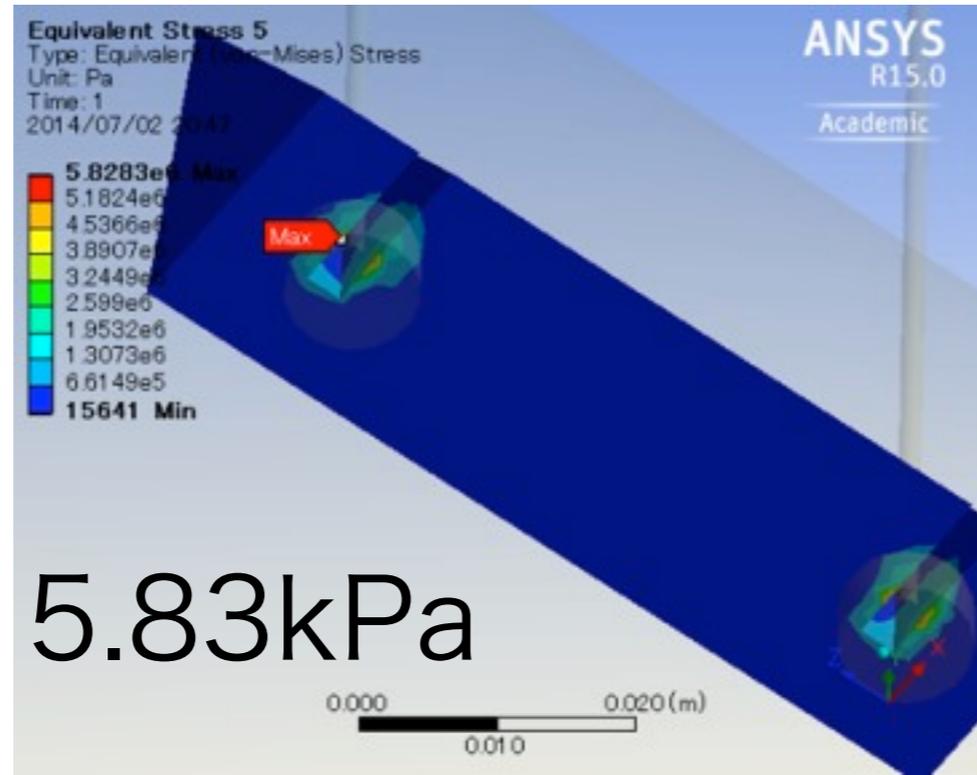

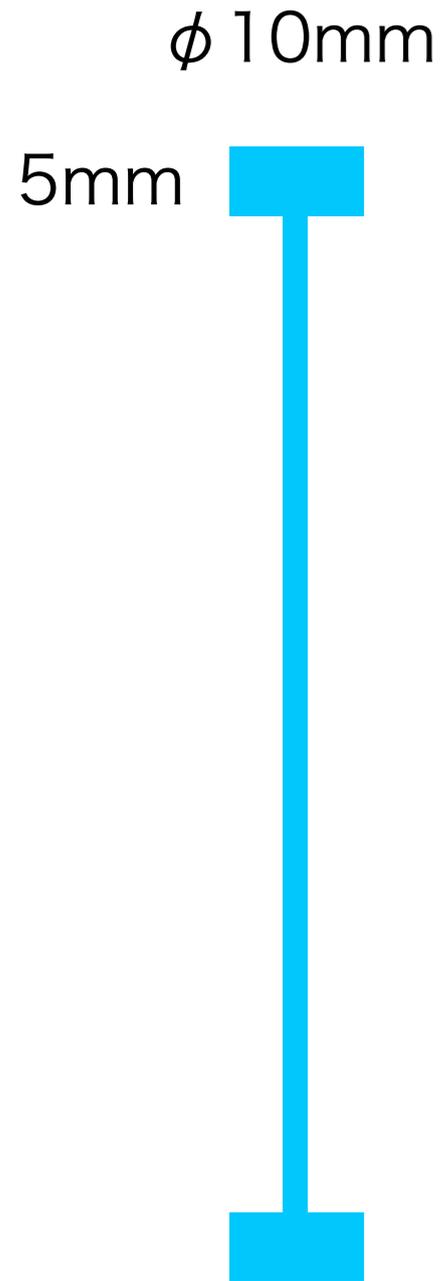

10mm

Max in fiber:

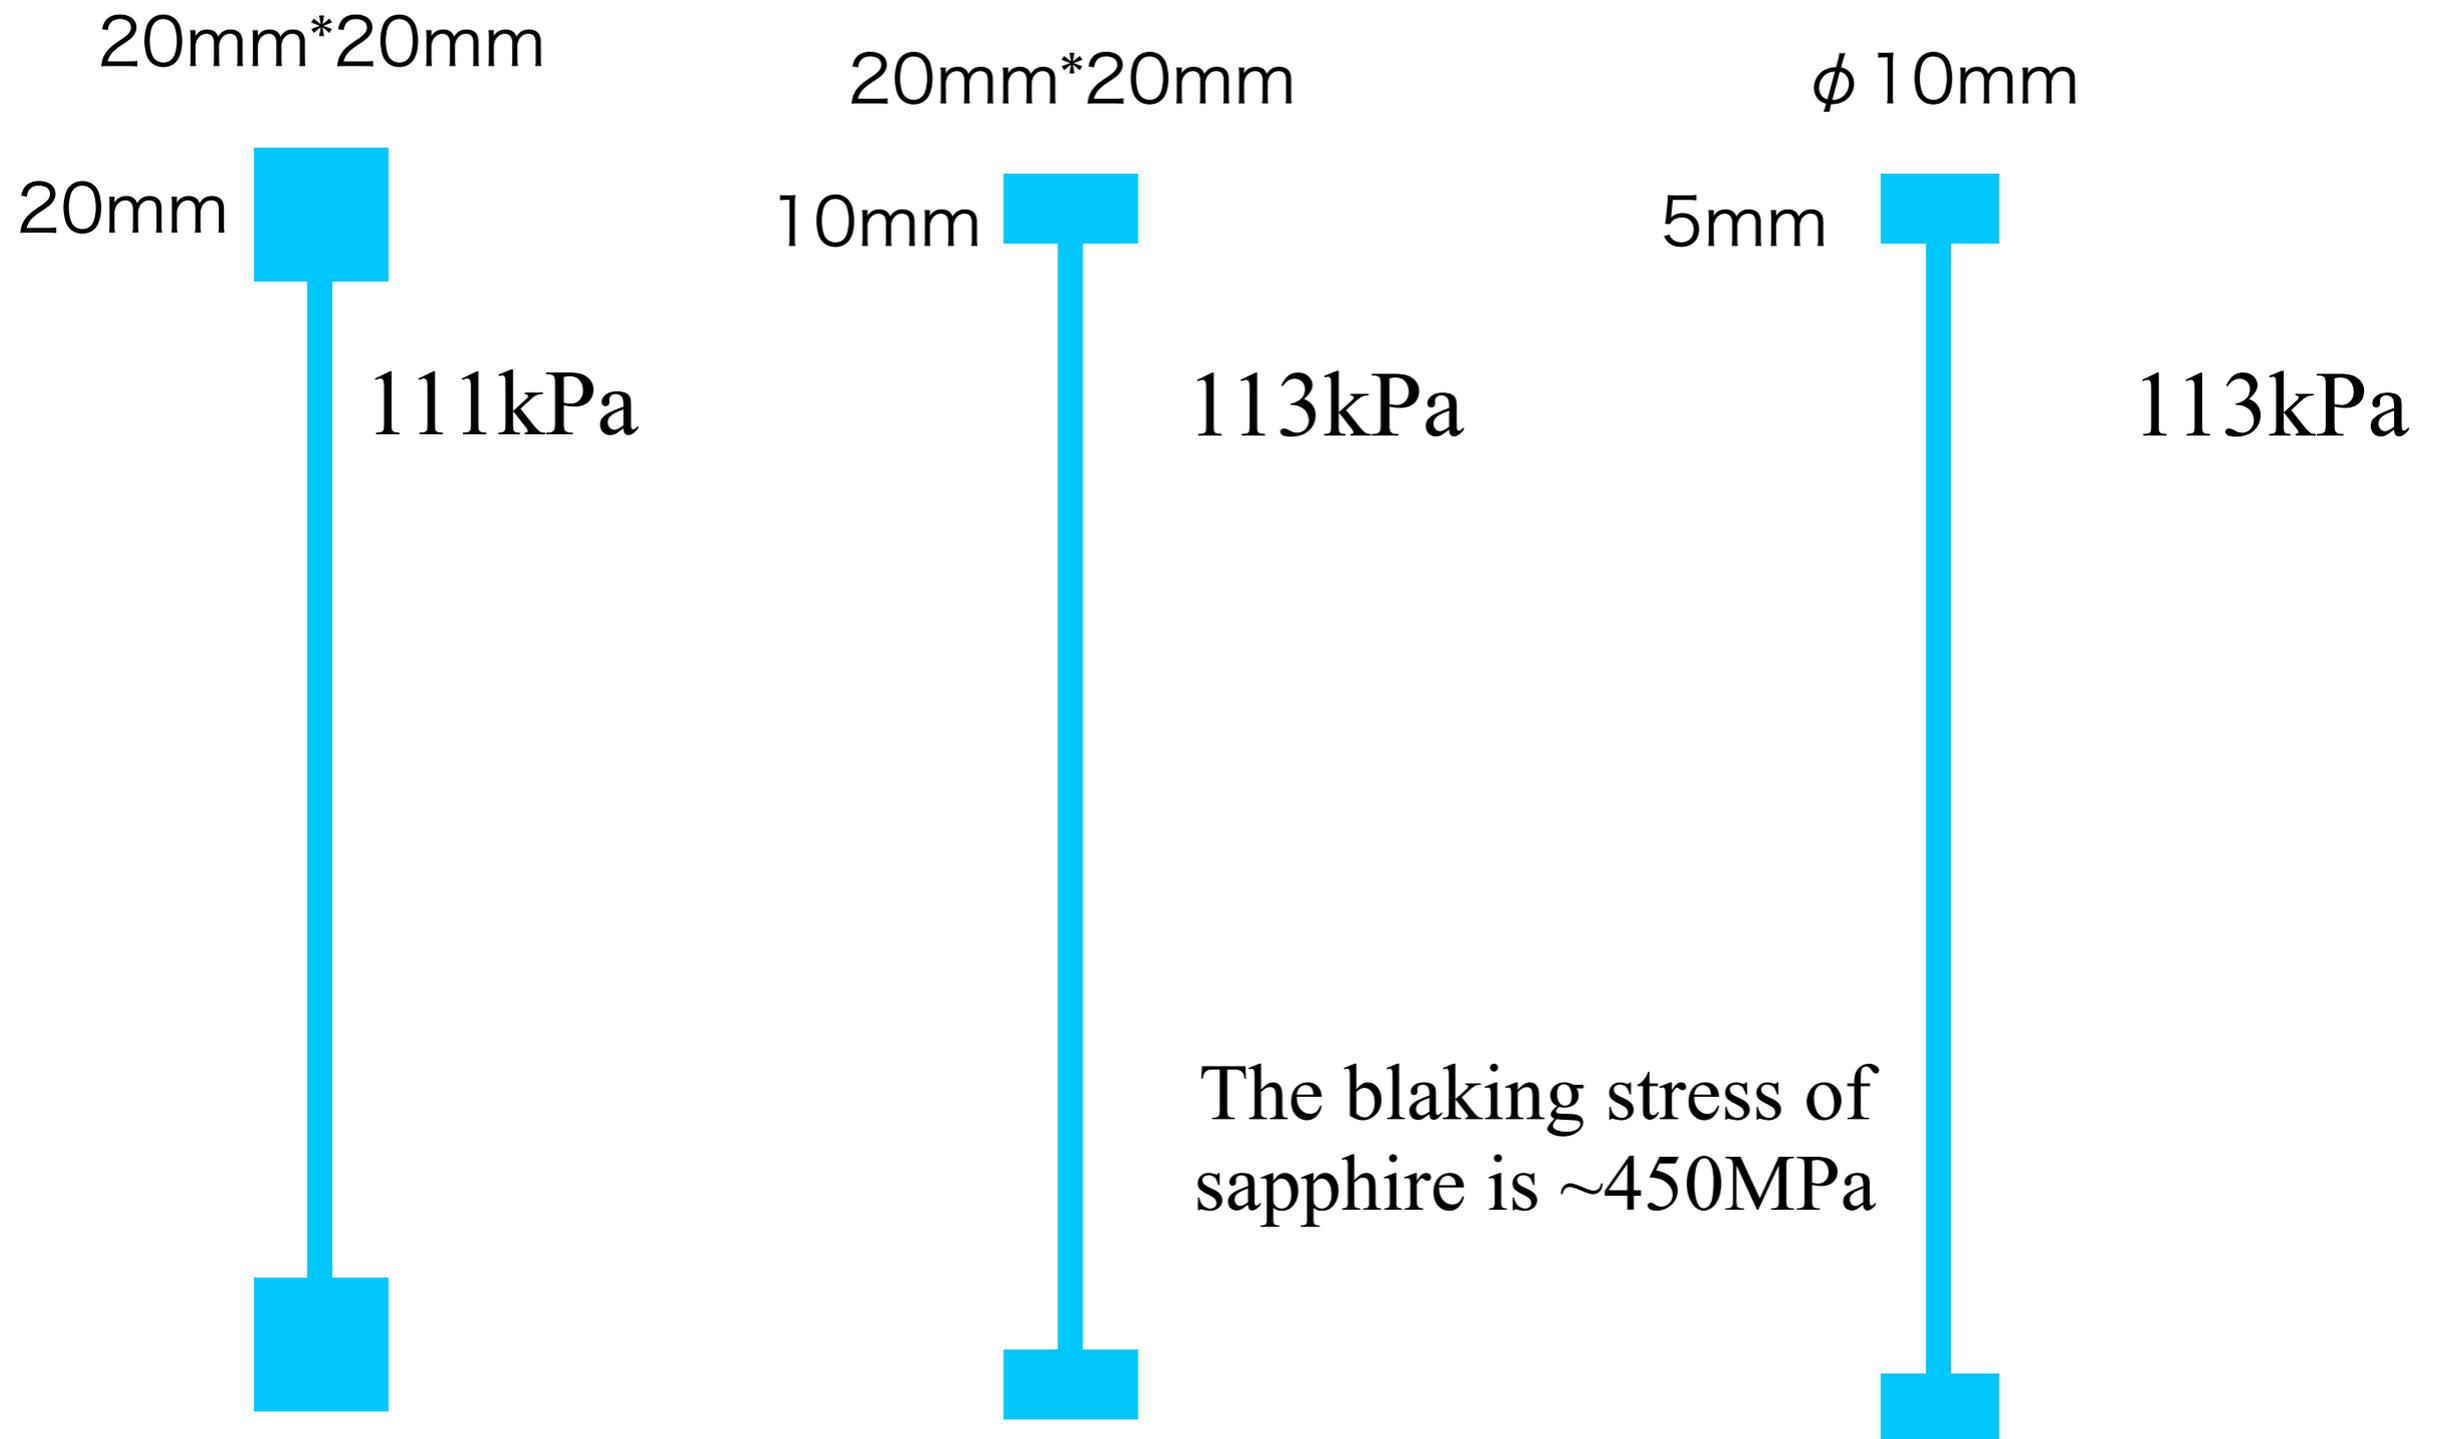

113kPa

# Fiber 3

Max in fiber:  
113kPa

# Different kind of fibers

The breaking stress of sapphire is  $\sim 450\text{MPa}$

There is no difference in terms of strength.  
We can choose the fiber in terms of the thermal noise  
(of indium and so on).
