# ISS inner loop circuit board documentation

LIGO-T0900631

---

Christina Bogan (christina.bogan@aei.mpg.de)

## Abstract

This is the electronic part of the feedback control system to stabilize the power of the Advanced LIGO laser behind the PMC. This loop is called the inner loop (in contrast to the outer loop that senses downstreams of the suspended mode cleaner and feeds back into the inner loop's error point). It will be controlled by EPICS. There are different possibilities for this electronics:

- the inner loop and the out of loop photodiode are interchangeable
- a first whitening filter and a gain stage for the photodiodes have to be placed on the photo detectors in order to reduce the effect on the cable to the servo board
- the offset of the AOM power actuator is digital adjustable
- input for the outer loop stabilization
- for the measurement of the transfer function there are analog and digital channels for the inner loop as well as for the outer loop
- digital switch to turn the control loop on and off

## Safety Instructions

In order to operate the circuit properly and safely, review the following guidelines before installing and using the unit. Failure to do so may result in equipment damage or bodily injury:

---

This circuit was designed as a laboratory equipment to be operated only by trained and qualified technicians in research institutes or development departments. For safety reasons, usage by other persons or in other environments is *not* recommended.

---

- This circuit uses extra-low voltage ( $< 50 V_{AC}$  and  $< 75 V_{DC}$ ) and is therefore exempt from the regulations of the *Low Voltage Directive* (2006/95/EC).
  - The unit does not contain any mechanical drive system. Therefore, the regulations of the *Machinery Directive* (2006/42/EC) do not apply.
- 

## Sicherheitshinweise

Nehmen Sie vor Aufbau und Inbetriebnahme des Geräts folgende Empfehlungen zur Kenntnis, um die Schaltung korrekt und sicher zu betreiben sowie Schäden und Verletzungen zu vermeiden:

---

Diese Schaltung wurde als Laborausstattung entworfen, die nur von qualifizierten und eingewiesenen Technikern in Forschungsinstituten oder Entwicklungsabteilungen benutzt wird. Aus Sicherheitsgründen wird die Verwendung durch andere Personen oder in anderer Umgebung *nicht* empfohlen.

---

- Diese Schaltung verwendet Kleinspannung ( $< 50 V_{AC}$  und  $< 75 V_{DC}$ ) und unterliegt daher nicht den Bestimmungen der *Niederspannungsrichtlinie* (2006/95/EC).
  - Das Gerät enthält kein mechanisches Antriebssystem – die Bestimmungen der *Maschinenrichtlinie* (2006/42/EC) sind daher nicht anwendbar.
-

## Circuit Lists

**Drill list:** The following table shows all *final* drill diameters used in the board. When manually drilling the clearance holes, round up to the nearest available drill bit diameter, ensuring that all components fit well. When manufacturing *through-plated* boards, adjust for the additional copper coating by increasing the diameter accordingly.

$\varnothing$ [ $\mu\text{m}$ ]	$\varnothing$ [mm]	$\varnothing$ [in]	Count
812	0.8	0.032	807
889	0.9	0.035	45
990	1.0	0.039	86
2692	2.7	0.106	6
3175	3.2	0.125	10
3200	3.2	0.126	3
Total			957

**Table 1:** Drill diameters used in the board

**Standard properties:** If not explicitly stated otherwise in the schematics or value and part lists, the circuit components have the following standard properties. Parts with ‘better’ properties can be easily substituted, but care should be taken if the specifications are *not* met.

- Wired resistors: Metal film 0.6 W, 1%, 200 V, TK 100
- SMD resistors: 1%, 150 V, TK 50, MiniMELF in thin film, other packages in thick film technology

**Value list:** The following list shows all components available on the board (sorted by part *values*) and can be used to quickly gather components. Additional information can possibly be found directly on the board (or in the schematics).

**Part list:** The following list shows all components available in the schematics (sorted by part *names*) and can be used to quickly locate components. The column *Layer/Cell* shows the position of the part on the board: *T* for top side and *B* for bottom side, followed by the cell of the surrounding frame (if available). The column *Sheets/Cells* shows the position of *all* the part's gates in the schematics: Sheet number followed by the cell of the surrounding frame (if available). Additional information can possibly be found directly in the schematics.
